R.U.R. Karel Čapek,2023-03-28 We rely on your support to help us keep producing beautiful, free, and unrestricted editions of literature for the digital age. Will you support our efforts with a donation? R.U.R., or Rossum’s Universal Robots is a play written in 1920 by Karel Čapek, a Czech writer who wrote many plays and novels, many of them with science-fiction and dystopian themes. R.U.R. is perhaps the most well-known of these works in the English-speaking world because it brought the word “robot” into the language. “Robot” is derived from the Czech word meaning “worker.” The play is set in the island headquarters of the R.U.R. corporation. The corporation has been manufacturing artificial beings which resemble humans, but who are tireless workers. They can be mass-produced in large numbers and are being adopted as workers in many countries. In the first scene of the play, they are visited by a young woman, Helena Glory, who aspires to relieve the lot of the robots, who she sees as oppressed. However, in what must be the fastest seduction scene in all drama, she is wooed and agrees to marry Harry Domin, the factory manager, who she has just met. She still however aspires to improve the life of robots and find a way to give them souls. Ultimately, however, this admirable desire leads to disaster for humankind. The play was translated into English, and slightly abridged, by Paul Selver and Nigel Playfair in 1923. This version quickly became popular with both British and American audiences and was well received by critics.

Nicolaes Witsen and Shipbuilding in the Dutch Golden Age A. J. Hoving,Diederick Wildeman,2012-03-29 In 1671, Dutch diplomat and scientist Nicolaes Witsen published a book that served, among other things, as an encyclopedia for the “shell-first” method of ship construction. In the centuries since, Witsen’s rather convoluted text has also become a valuable source for insights into historical shipbuilding methods and philosophies during the “Golden Age” of Dutch maritime trade. However, as André Wegener Sleeswyk’s foreword notes, Witsen’s work is difficult to access not only for its seventeenth-century Dutch language but also for the vagaries of its author’s presentation. Fortunately for scholars and students of nautical archaeology and shipbuilding, this important but chaotic work has now been reorganized and elucidated by A. J. Hoving and translated into English by Alan Lemmers. In *Nicolaes Witsen and Shipbuilding in the Dutch Golden Age*, Hoving, master model builder for the Rijksmuseum in Amsterdam, sorts out the steps in Witsen’s method for building a seventeenth-century pinas by following them and building a model of the vessel. Experimenting with techniques and materials, conducting research in other publications of the time, and rewriting as needed to clarify and correct some vital omissions in the sequence, Hoving makes Witsen’s work easier to use and understand. *Nicolaes Witsen and Shipbuilding in the Dutch Golden Age* is an indispensable guide to Witsen’s work and the world of his topic: the almost forgotten basics of a craftsmanship that has been credited with the flourishing of the Dutch Republic in the seventeenth century. The End of Poverty Jeffrey D. Sachs,2006-02-28 Book and man are brilliant, passionate, optimistic and impatient . . . Outstanding. —The Economist The landmark exploration of economic prosperity and how the world can escape from extreme poverty for the world's poorest citizens, from one of the world's most renowned economists Hailed by Time as one of the world's hundred most influential people, Jeffrey D. Sachs is renowned for his work around the globe advising economies in crisis. Now a classic of its genre, *The End of Poverty* distills more than thirty years of experience to offer a uniquely informed vision of the steps that can transform impoverished countries into prosperous ones. Marrying vivid storytelling with rigorous analysis, Sachs lays out a clear conceptual map of the world economy. Explaining his own work in Bolivia, Russia, India, China, and Africa, he offers an integrated set of solutions to the interwoven economic, political, environmental, and social problems that challenge the world's poorest countries. Ten years after its initial publication, *The End of Poverty* remains an indispensable and influential work. In this 10th anniversary edition, Sachs presents an extensive new foreword assessing the progress of the past decade, the work that remains to be done, and how each of us can help. He also looks ahead across the next fifteen years to 2030, the United Nations' target date for ending extreme poverty, offering new insights and recommendations.

Thinking in Systems Donella Meadows,2008-12-03 The classic book on systems thinking—with more than half a million copies sold worldwide! This is a fabulous book... This book opened my mind and reshaped the way I think about investing.—Forbes Thinking in Systems is required reading for anyone hoping to run a successful company, community, or country. Learning how to think in systems is now part of change-agent literacy. And this is the best book of its kind.—Hunter Lovins In the years following her role as the lead author of the international bestseller, *Limits to Growth*—the first book to show the consequences of unchecked growth on a finite planet—Donella Meadows remained a pioneer of environmental and social analysis until her untimely death in 2001. Thinking in Systems is a concise and crucial book offering insight for problem solving on scales ranging from the personal to the global. Edited by the Sustainability Institute's Diana Wright, this essential primer brings systems thinking out of the realm of computers and equations and into the tangible world, showing readers how to develop the systems-thinking skills that thought leaders across the globe consider critical for 21st-century life. Some of the biggest problems facing the world—war, hunger, poverty, and environmental degradation—are essentially system failures. They cannot be solved by fixing one piece in isolation from the others, because even seemingly minor details have enormous power to undermine the best efforts of too-narrow thinking. While readers will learn the conceptual tools and methods of systems thinking, the heart of the book is grander than methodology. Donella Meadows was known as much for nurturing positive outcomes as she was for delving into the science behind global dilemmas. She reminds readers to pay attention to what is important, not just what is quantifiable, to stay humble, and to stay a learner. In a world growing ever more complicated, crowded, and interdependent, Thinking in Systems helps readers avoid confusion and helplessness, the first step toward finding proactive and effective solutions.

Principles of Management David S. Bright,Anastasia H. Cortes,Eva Hartmann,2023-05-16 Black & white print. Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.

Good Economics for Hard Times Abhijit V. Banerjee,Esther Duflo,2019-11-12 The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, Good Economics for Hard Times makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

Guidelines for Drinking-water Quality World Health Organization,1993 This volume describes the methods used in the surveillance of drinking water quality in the light of the special problems of small-community supplies, particularly in developing countries, and outlines the strategies necessary to ensure that surveillance is effective.

The Fingerprint U. S. Department Justice,2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched

information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Construction and Building Research Carmen Llinares-Millán,Igor Fernández-Plazaola,Francisco Hidalgo-Delgado,María Montserrat Martínez-Valenzuela,Francisco Javier Medina-Ramón,Inmaculada Oliver-Faubel,Isabel Rodríguez-Abad,Andrea Salandin,Rafael Sánchez-Grandia,Isabel Tort-Ausina,2014-01-31 Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.
