**Energiya-Buran** Bart Hendrickx,Bert Vis,2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

**Handprints on Hubble** Kathryn D. Sullivan,2019-11-05 The first American woman to walk in space recounts her experience as part of the team that launched, rescued, repaired, and maintained the Hubble Space Telescope The Hubble Space Telescope has revolutionized our understanding of the universe. It has, among many other achievements, revealed thousands of galaxies in what seemed to be empty patches of sky; transformed our knowledge of black holes; found dwarf planets with moons orbiting other stars; and measured precisely how fast the universe is expanding. In *Handprints on Hubble*, retired astronaut Kathryn Sullivan describes her work on the NASA team that made all this possible. Sullivan, the first American woman to walk in space, recounts how she and other astronauts, engineers, and scientists launched, rescued, repaired, and maintained Hubble, the most productive observatory ever built. Along the way, Sullivan chronicles her early life as a "Sputnik Baby," her path to NASA through oceanography, and her initiation into the space program as one of "thirty-five new guys." (She was also one of the first six women to join NASA's storied astronaut corps.) She describes in vivid detail what liftoff feels like inside a spacecraft (it's like "being in an earthquake and a fighter jet at the same time"), shows us the view from a spacewalk, and recounts the temporary grounding of the shuttle program after the Challenger disaster. Sullivan explains that "maintainability" was designed into Hubble, and she describes the work of inventing the tools and processes that made on-orbit maintenance possible. Because in-flight repair and upgrade was part of the plan, NASA was able to fix a serious defect in Hubble's mirrors—leaving literal and metaphorical "handprints on Hubble." *Handprints on Hubble* was published with the support of the MIT Press Fund for Diverse Voices.

*Regenerative Strategies for Maxillary and Mandibular Reconstruction* James C. Melville,Jonathan W. Shum,Simon Young,Mark E. Wong,2019-03-25 This book is designed as a comprehensive and up-to-date instructional guide to the strategies employed for regeneration of the maxillomandibular region, with emphasis on allogeneic and tissue engineering principles. Readers will find information on indications and contraindications for procedures, pertinent anatomy, surgical techniques, postoperative management, and management of complications. Current surgical techniques utilizing biotechnology for regeneration and reconstruction are described in depth, with explanation of their benefits in minimizing patient morbidity. In addition, state of the art free vascular transfer for maxillary and mandibular reconstruction is extensively discussed, with a particular focus on indications and step-by-step technique. The authors are well-known experts in their field who are keen to share their extensive experience and preferred approaches. The book is intended for all oral and maxillofacial surgeons, head and neck surgeons, and plastic and reconstruction surgeons who wish to increase their knowledge on the latest modalities of maxillary and mandibular reconstruction.

**Wheelock's Latin** Frederic M. Wheelock,2010-10-12 The classic, single-volume introductory Latin textbook, introduced in 1956 and still the bestselling and most highly regarded textbook of its kind. Wheelock's Latin, sixth edition, revised, has all the features that have made it the best-selling single-volume beginning Latin textbook, many of them revised and expanded: o 40 chapters with grammatical explanations and readings based on ancient Roman authors o Self-tutorial exercises with an answer key for independent study o An extensive English-Latin/ Latin-English vocabulary section o A rich selection of original Latin readings — unlike other textbooks which contain primarily made-up Latin texts o Etymological aids Also includes maps of the Mediterranean, Italy and the Aegean area, as well as numerous photographs illustrating aspects of classical culture, mythology, and historical and literary figures presented in the chapter readings. o The leading self-tutorial Latin program. Also great for college and accelerated high school courses. o Wheelock's Latin is the top-selling Latin reference in the US. o Interest and enrolments in Latin have been steadily rising in the U.S. for the past 20 years. One-half million people are currently enrolled in Latin classes, and at least 10,000 teachers, professors and graduate assistants are teaching the language in America.

**Battlestar Galactica: Designing Spaceships** Paul Ruditis,Mark Wright,2021-11-16 This new book goes behind the scenes on the award-winning TV series Battlestar Galactica to discover the concepts behind the designs of dozens of spaceships! Battlestar Galactica debuted on TV in 1978 and acquired a phenomenal following, breaking new ground for TV drama and winning several awards. It returned to TV screens in 2003 in a critically acclaimed reimagined series, with Time Magazine naming it one of the 100 Best TV Shows of All Time. This behind-the-scenes guide looks at the creation of the ships in both the original and the reimagined series, including vessels of the ragtag fleet and those of the Cylon enemy. Featuring artwork from the groundbreaking first series and the 2004 reimagined series, this volume explores the art of ship creation from the first sketches to the finished designs of the modelmakers. Covering 18 key ships from the two shows, including the Galactica itself, the Vipers and the Cylon Raiders, the pages are packed with original concept art from designers Eric Chu, Andrew Probert and legendary artist Ralph McQuarrie.

Basics of Virtual Reality Armin Grasnack,2022-01-04 Today, the reality we know can be recorded and reproduced true to reality using technical processes. Space and time are recreated virtually as a copy in artificial reality. However, the reproduction of virtual reality is not limited to a mere copy of what exists. A visitor to the virtual space does not have to be content with the pixelated image of the old familiar, but can encounter unreal phenomena in the illusory world that never existed in real life or are even

physically impossible. This enables an expansion of the recorded reality and allows the perception of surprisingly new perspectives. A perspective denotes the perception of a fact from a certain point of view and corresponds to the way of looking at things. But a perspective is also the observation of a scene from a viewing position. From different perspectives the illusion of reality arises during the reproduction by observation. This vision is not based on imagination or hallucination, but is the basic function of virtual reality. This book describes the concepts, systems, and technologies used to create virtual reality from its ancient beginnings to the present, and provides a glimpse into a possible future. This book is a translation of the original German 1st edition *Grundlagen der virtuellen Realität* by Armin Grasnack, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

**New Directions in Aesthetics, Creativity and the Arts** Paul Locher, Colin Martindale, Leonid Dorfman, 2020-02-10 The contributing authors to this book, all pre-eminent scholars in their fields, present their current thinking about the processes that underlie creativity and aesthetic experience. They discuss established theory and research and provide creative speculation on future problems for inquiry and new approaches to conceptualising and investigating these phenomena. The book contains many new findings and ideas never before published or new by virtue of the novel context in which they are incorporated. Thus, the chapters present both new approaches to old problem and new ideas and approaches not yet explored by leading scholars in these fields. The first part of the book is devoted to understanding the nature of the perceptual/cognitive and aesthetic processes that occur during encounters with visual art stimuli in everyday settings, in museums and while watching films. Also discussed in Part I is how cultural and anthropological approaches to the study of aesthetic responses to art contribute to our understanding about the development of a culture's artistic canon and to cross-cultural aesthetic universals. Part II presents new dimensions in the study of creativity. Two approaches to the development of a comprehensive theory of creativity are presented: Sternberg's Investment Theory of Creativity and a systems perspective of creativity based on a metaindividual world model. Also covered are the factors that contribute to cinematic creativity and a film's cinematic success, and the complex nature of the creative processes and research approaches involved in the innovative product design necessitated by the introduction of electronics in consumer products. Part III deals with the application of concepts and models from cognitive psychology to the study of music, literary meaning and the visual arts. The contributors outline a model of the cognitive processes involved in real-time listening to music, investigate what readers are doing when they read a literary text, describe what research shows about the transfer of learning from the arts to non-arts cognition and discuss the kinds of thinking skills that emerge from the study of the visual arts by high school students. In Part IV, the authors focus on the interactive contribution of observers' personalities and affect states to the creation and perception of art. The chapters include a discussion of the internal mechanisms by which personality expresses itself during the making of and the response to art; the relationship between emotion and cognition in aesthetics, in terms of the interaction of top-down and bottom-up processes across the time course of an aesthetic episode; the affective processes that take place during pretend play and their impact on the development of creativity in children and the causes and consequences of listener's intense experiences while listening to music.

**Matter in the Universe** Ph. Jetzer, Klaus Pretzl, Rudolf von Steiger, 2002-07-31 This volume, the

fourteenth in the Space Sciences Series of ISSI/, is dedicated to the matter in the universe, which was the topic of a workshop organized by ISSI from 19 to 22 March 2001 in Bern. The aim of the meeting was to gather active researchers from various fields (cosmology, astrophysics, nuclear and particle physics as well as space science) to assess the exciting new developments in the search for abundant and yet unknown forms of matter in the universe. Due to the importance of the field and the rapid developments which are taking place ISSI decided to organize a workshop on matter in the universe and invited nine convenors, John Ellis, Johannes Geiss, Philippe Jetzer, Heinrich Leutwyler, Klaus Pretzl, Rafael Rebolo, Norbert Straumann, Gustav Andreas Tammann and Rudolf von Steiger, who formulated the aims and goals of the meeting. The workshop was organized such as to have only plenary sessions with typically half hour presentations and ample time for discussions. The last day was devoted to conclusions and future objectives. The knowledge of the amount and nature of matter present in the universe is undoubtedly one of the most relevant topics of today's astrophysics and cosmology.

Virtual Reality in Psychological, Medical and Pedagogical Applications Christiane Eichenberg, 2012-09-12 This book has an aim to present latest applications, trends and developments of virtual reality technologies in three humanities disciplines: in medicine, psychology and pedagogy. Studies show that people in both educational as well as in the medical therapeutic range expect more and more that modern media are included in the corresponding demand and supply structures. For the Internet and various mobile media, associated research and application projects now have fixed key words such as E-learning and E-Mental Health or M-Learning, M-Mental Health. This book aims to contribute to the current state of the corresponding efforts in the area of ??further promising technology - the Virtual Reality - designed to give an overview and secondly to provide a stimulus on specific projects, associated with the hope of giving to scientists and practitioners from the humanities an impulse for their own (further-) development, evaluation and implementation of various VR scenarios in the education and health sectors.

Hardware: The Definitive SF Works of Chris Foss Chris Foss, 2011-09-06 Foss's groundbreaking and distinctive science fiction art revolutionized paperback covers in the 1970s and 80s. Dramatically raising the bar for realism and invention, his trademark battle-weary spacecraft, dramatic alien landscapes and crumbling brutalist architecture irrevocably changed the aesthetic of science fiction art and cinema. Featuring work for books by Isaac Asimov, E. E. 'Doc' Smith, Arthur C. Clarke, A. E. Van Vogt and Philip K. Dick, and film design for Ridley Scott and Stanley Kubrick, this volume brings together many rare and classic images that have never been seen or reprinted before. The first comprehensive retrospective of Chris Foss's SF career. "Chris Foss' name has become pre-eminent among sf artists... He is in love with the monstrous, with angular momentum, with inertia-free projectiles and irresistible objects." — Brian Aldiss "[Foss'] creations are real machines, not just an artist's dreams. They combine the two elements so essential to science fiction: realism and a sense of wonder... A medieval goldsmith of future eons." — Alejandro Jodorowsky
