Achtung-Panzer! Heinz Guderian, 1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

One Place after Another Miwon Kwon, 2004-02-27 A critical history of site-specific art since the late 1960s. Site-specific art emerged in the late 1960s in reaction to the growing commodification of art and the prevailing ideals of art's autonomy and universality. Throughout the 1970s and 1980s, as site-specific art intersected with land art, process art, performance art, conceptual art, installation art, institutional critique, community-based art, and public art, its creators insisted on the inseparability of the work and its context. In recent years, however, the presumption of unrepeatability and immobility encapsulated in Richard Serra's famous dictum to remove the work is to destroy the work is being challenged by new models of site specificity and changes in institutional and market forces. *One Place after Another* offers a critical history of site-specific art since the late 1960s and a theoretical framework for examining the rhetoric of aesthetic vanguardism and political progressivism associated with its many permutations. Informed by urban theory, postmodernist criticism in art and architecture, and debates concerning identity politics and the public sphere, the book addresses the siting of art as more than an artistic problem. It examines site specificity as a complex cipher of the unstable relationship between location

and identity in the era of late capitalism. The book addresses the work of, among others, John Ahearn, Mark Dion, Andrea Fraser, Donald Judd, Renee Green, Suzanne Lacy, Inigo Manglano-Ovalle, Richard Serra, Mierle Laderman Ukeles, and Fred Wilson.

Ectogenesis Scott Gelfand, John R. Shook, 2006 This book raises many moral, legal, social, and political, questions related to possible development, in the near future, of an artificial womb for human use. Is ectogenesis ever morally permissible? If so, under what circumstances? Will ectogenesis enhance or diminish women's reproductive rights and/or their economic opportunities? These are some of the difficult and crucial questions this anthology addresses and attempts to answer.

Origamics Kazuo Haga, Josefina Fonacier, Masami Isoda, 2008 The art of origami, or paper folding, is carried out using a square piece of paper to obtain attractive figures of animals, flowers or other familiar figures. It is easy to see that origami has links with geometry. Creases and edges represent lines, intersecting creases and edges make angles, while the intersections themselves represent points. Because of its manipulative and experiential nature, origami could become an effective context for the learning and teaching of geometry. In this unique and original book, origami is an object of mathematical exploration. The activities in this book differ from ordinary origami in that no figures of objects result. Rather, they lead the reader to study the effects of the folding and seek patterns. The experimental approach that characterizes much of science activity can be recognized throughout the book, as the manipulative nature of origami allows much experimenting, comparing, visualizing, discovering and conjecturing. The reader is encouraged to fill in all the proofs, for his/her own satisfaction and for the sake of mathematical completeness. Thus, this book provides a useful, alternative approach for reinforcing and applying the theorems of high school mathematics.

Project Origami Thomas Hull, 2012-12-21 Project Origami: Activities for Exploring Mathematics, Second Edition presents a flexible, discovery-based approach to learning origami-math topics. It helps readers see how origami intersects a variety of mathematical topics, from the more obvious realm of geometry to the fields of algebra, number theory, and combinatorics. With over 100 new pages, this updated and expanded edition now includes 30 activities and offers better solutions and teaching tips for all activities. The book contains detailed plans for 30 hands-on, scalable origami activities. Each activity lists courses in which the activity might fit, includes handouts for classroom use, and provides notes for instructors on solutions, how the handouts can be used, and other pedagogical suggestions. The handouts are also available on the book's CRC Press web page. Reflecting feedback from teachers and students who have used the book, this classroom-tested text provides an easy and entertaining way for teachers to incorporate origami into a range of college and advanced high school math courses. Interactive Art and Embodiment Nathaniel Stern, 2013-08-05 What is interactive art? Is this a genre? A medium? An art movement? Must a work be physically active to be classified as such, or do we interact when we sense and make sense? Is a switch-throw or link-click enough - I do this, and that happens - or must subjects and objects be confused over time? Is interaction multiple in its engagements (relational), or a one-to-one reaction (programmed)? Are interactive designs somehow more democratic and individualized than others, or is that merely a commercial strategy to sell products and ideas? This book argues that interactive art frames moving-thinking-feeling as embodiment; the body is addressed as it is formed, and in relation. Interactive installations amplify how the body's inscriptions, meanings, and matters unfold out, while the world's sensations, concepts, and matters enfold in. Interactive artwork creates situations that enhance, disrupt, and alter experience and action in ways that call attention to our varied relationships with and as both structure and matter. Nathaniel Stern's inspirational book, *Interactive Art and Embodiment*, outlines

how new media has the ability to intervene in, and challenge, not only the construction of bodies and identities, but also the ongoing and emergent processes of embodiment, as they happen. It includes immersive descriptions of a significant number of interactive artworks and over 40 colour images. The theorists, artists, practitioners and curators discussed in this text include Brian Massumi, Christiane Paul, Sarah Cook, Beryl Graham, Kelli Fuery, Theodore Watson, William Kentridge, Char Davies, Stelarc, Janet Cardiff, Carlo Zanni, Tero Saarinen, Karen Barad, Daniel Rozin, Richard Schechner, Nicole Ridgway, Rebecca Schneider, Annie Sprinkle, Karen Finley, VALIE EXPORT, The Guerrilla Girls, Tegan Bristow, Brian Knepp, Anna Munster, Zach Lieberman, Golan Levin, Simon Penny, Camille Utterback, Jean-Luc Nancy, The Millefiore Effect, Nick Crossley, Mathieu Briand, Scott Snibbe, David Rokeby, José Gil, Erin Manning, Rafael Lozano-Hemmer, and Norah Zuniga Shaw

Studio Ghibli Colin Odell, Michelle Le Blanc, 2009-09-01 The animations of Japan's Studio Ghibli are amongst the highest regarded in the movie industry. Their delightful films rank alongside the most popular non-English language films ever made, with each new eagerly-anticipated release a guaranteed box-office smash. Yet this highly profitable studio has remained fiercely independent, producing a stream of imaginative and individual animations. The studio's founders, long-time animators Isao Takahata and Hayao Miyazaki, have created timeless masterpieces. Although their films are distinctly Japanese their themes are universal—humanity, community, and a love for the environment. No other film studio, animation or otherwise, comes close to matching Ghibli for pure cinematic experience. All their major works are examined here, as well the early output of Hayao Miyazaki and Isao Takahata, exploring the cultural and thematic threads that bind these films together.

Building with Butterflies Consultant Oral and Maxillofacial Surgeon Honorary Consultant and Senior Clinical Lecturer David Mitchell, David Mitchell, 2011-01 Building with Butterflies shows you how to build stunning modular origami sculptures from simple units folded from ordinary paper without the use of cuts or glue. Energy Absorption of Structures and Materials G Lu, T X Yu, 2003-10-31 This important study focuses on the way in which structures and materials can be best designed to absorb kinetic energy in a controllable and predictable manner. Understanding of energy absorption of structures and materials is important in calculating the damage to structures

caused by accidental collision, assessing the residual strength of structures after initial damage and in designing packaging to protect its contents in the event of impact. Whilst a great deal of recent research has taken place into the energy absorption behaviour of structures and materials and significant progress has been made, this knowledge is diffuse and widely scattered. This book offers a synthesis of the most recent developments and forms a detailed and comprehensive view of the area. It is an essential reference for all engineers concerned with materials engineering in relation to the theory of plasticity, structural mechanics and impact dynamics. Important new study of energy absorption of engineering structures and materials Shows how they can be designed to withstand sudden loading in a safe, controllable and predictable way Illuminating case studies back up the theoretical analysis
