**Việt Nam Exposé** Gisèle Luce Bousquet 2002 A collection of essays written on twentieth-century Vietnamese society, Vit Nam Exposé is one of only a handful of books written by French scholars for an English-speaking audience. The volume is multidisciplinary and represents a new trend in Vietnamese studies that addresses issues beyond politics, wars, and violence, exploring the complexity of more subtle power

relationships in Vietnamese society. The book is divided into three parts. Part I, "Vietnamese Society in the Early Twentieth Century," takes a micro approach to the study of Vietnamese society on the eve of the irreversible social transformation that occurred as the colonial infrastructure took root in Indochina. Part II, "Vietnamese Intellectuals: Contesting Colonial Power," contains biographical accounts of Vietnamese intellectuals who

tried to reform their society under colonial domination. Part III, "Post-Colonial Vietnam: From Welfare State to Market-Oriented Economy," traces Vietnam's search for a viable economic model while maintaining itself as a socialist state. The book speaks to diverse themes, including the nature of village life, the development of health care during the colonial era, the status of women, the role of Vietnamese intellectuals in the anticolonial struggle, the building of a socialist state, contemporary rural migration, labor relations, and Vietnam in an age of globalization. Gisele Bousquet is Research Associate at the Center for Southeast Asian Studies, University of California, Berkeley. Pierre Brocheux is Matre de Conference of History, Universit Denis Diderot-Paris VII.

2017-02-24 An adhesive is a material used for holding two surfaces together. In the service condition that way adhesives can be called as "Social" as they unite individual parts creating a whole. A useful way to classify adhesives is by the way they react chemically after they have been applied to the surfaces to be joined. There is a huge range of adhesives, and one appropriate for the materials being joined must be chosen. Gums and resins are polymeric compounds and manufactured by synthetic routes. Gums and resins largely used in water or other solvent soluble form for providing special properties to some formulations. More than 95% of total adhesive used worldwide are based on synthetic resins. Gums and resins have wide industrial applications. They are used in manufacture of lacquers, printing inks, varnishes, paints, textiles, cosmetics, food and other industries. Increase in disposable income levels, rising

GDP and booming retail markets are propelling growth in packaging and flexible packaging industry. Growth of disposable products is expected to increase, which leads to increase in consumption of adhesives in packaging industry. The global value of adhesive resins market is estimated to be \$11,339.66 million and is projected to grow at a CAGR of about 4.88% in coming years. Rapid urbanization coupled with growing infrastructure and real estate construction projects is projected to further fuel demand for adhesives in India. This handbook covers photographs of plant & machinery with supplier's contact details and manufacturing aspects of various adhesives, glues & resins. The major contents of the book are glues of animal origin, fish glues, animal glues, casein glues & adhesives, blood albumen glues, amino resin adhesives, cyanoacrylate adhesives, epoxy resin adhesives, phenolic resin adhesives, polychloroprene

Modern Technology Of Oils, Fats & Its Derivatives (2nd Revised Edition) NIIR Board 2013-02-05 Until recently fats and oils have been in surplus, and considered a relatively low

value byproduct. Only recently have energy uses of fats and oils begun to be economically viable. Food value of fats and oils is still far above the energy value of fats and oils. Industrial and technical value of fats and oils is still above the energy value of fats and oils. Animal feeds value of fats and oils tends to remain below the energy value of fats and oils. With development of new technology oils and fats industry has undergone a number of changes and challenges that have prompted the development of new technologies, and processing techniques. Oils and fats constitute one of the major classes of food products. In fact oils and fats are almost omnipresent in food processing - whether naturally occurring in foods or added as ingredients for functional benefits and, despite the impression given by several sources to the contrary; they remain an essential part of the human diet. However, it is increasingly apparent that both the quantity and the quality of

The book includes sources, utilization and classification of oil and fats followed by the next chapter that contain details in physical properties of fat and fatty acids. Exquisite reactions of fat and fatty acids are also included in the later chapter. It also focuses majorly

in fractionation of fat and fatty acids, solidification, homogenization and emulsification, extraction of fats and oils from the various sources, detail application in paints, varnishes, and related products is also included. It also provides accessible, concentrated information on the composition, properties, and uses of the oils derived as the major product followed by modifications of these oils that are commercially available by means of refining, bleaching and deodorization unit with detailed manufacturing process, flow diagram and other related information of important oils, fats and their derivatives. ## **Spices & Condiments (with Cultivation, Processing & Uses) 2nd Revised Edition**

NIIR Board of Consultants & Engineers 2006-04-01 The term spices and condiments applies to such natural plant or vegetable products and mixtures thereof, used in whole or ground form, mainly for imparting flavor, aroma and piquancy to foods and also for seasoning of foods beverages like soups. The great mystery and beauty of spices is their use, blending and ability to change and enhance the character of food. Spices and condiments have a special significance in various ways in human life because of its specific flavours, taste, and aroma. Spices and condiments play an important role in the national economies of several spice producing, importing and exporting countries. India is one of the major spice producing and exporting countries. Most of the spices and herbs have active principles in them and development of these through pharmacological and

preclinical and clinical screening would mean expansion of considerable opportunities for successful commercialization of the product. Spices can be used to create these health promoting products. The active components in the spices phthalides, polyacetylenes, phenolic acids, flavanoids, coumarines, triterpenoids, serols and monoterpenes are powerful tools for promoting physical and emotional wellness. India has been playing a major role in producing and exporting various perennial spices like cardamoms, pepper, vanilla, clove, nutmeg and cinnamon over a wide range of suitable climatic situations. To produce good quality spice products, attention is required not only during cultivation but also at the time of harvesting, processing and storing. Not as large as in the days when, next to gold, spices were considered most worth the risk of life and money. The trade is still extensive and the oriental demand is as large as ever.

These are widely used in homes as well as in industry because painted surfaces are attractive and easy to keep clean. Paint is generally made up of a pigment. It is a chemical material, which alters the color of reflected or transmitted light due to wavelength-selective absorption. Varnish is a transparent, hard, protective finish or film primarily used in wood finishing but also for other materials. Varnish is traditionally a combination of a drying oil, a resin, and a thinner or solvent. The technology of paints, varnishes and enamels is changing rapidly and becoming more complex each day. *Discovering Craft Villages in Vietnam* Sylvie Fanchette 2018-11-19 With their festivals and traditional industries, their commun halls, pagodas, temples, and vernacular buildings, the villages around Hà Nội possess a rich body of cultural, architectural and craft heritage. Less than one hour from the capital are over 500 specialist craft villages,

producing an array of religious or artistic objects, as well as food products, industrial goods, textiles, basketware and much more. Despite the trials and tribulations Vietnam has endured, these traditions have remained alive; today they constitute the basis of material, social and spiritual culture among the village communities of the Red River delta. The artisans themselves, and their local institutions, see cultural tourism as a way of further improving the fortunes of the craft village communities and bringing their heritage to wider attention. Until recently, few guides or tourists had forayed into these settlements, some of which are lost in the maze of routes and tracks that criss-cross the rice paddies of the Hà Nội hinterland. The history and skills they harbour have been inaccessible to all but a few specialists. Few of the villages are signposted, yet between them they are home to three quarters of the architectural, religious and craft heritage of the upper delta. This book, the fruit of

several years' research by specialists working in northern Vietnam, comprises ten itineraries, blending potted histories, legends, descriptions of craft techniques, signposted walks and maps, designed to introduce travellers and lovers of Vietnamese culture to forty or so villages around Hà Nội. Many of us have seen their wares on sale in shops in and around the 36 streets of Hà Nội Old Quarter or in other cities in West. This book is about the true lives and enduring skills of the nameless artisans who made them.

Handbook on Food Biotechnology (Extraction, Processing of Fruits, Vegetables and Food Products)

2nd Revised Edition NIIR Board of Consultants & Engineers 2017-11-08 Modern biotechnology refers to various scientific techniques used to produce specific desired traits in plants, animals or microorganisms through the use of genetic knowledge. Since its introduction to agriculture and food production in the early-1990,

biotechnology has been utilized to develop new tools for improving productivity.

Biotechnology is a broad term that applies to the use of living organisms and covers techniques that range from simple to sophisticated. In contrast, modern agricultural biotechnology techniques, such as genetic engineering, allow for more precise development of crop and livestock varieties. The potential benefits of biotechnology are enormous. Food producers can use new biotechnology to produce new products with desirable characteristics. These include characteristics such as disease and drought-resistant plants, leaner meat and enhanced flavor and nutritional quality of foods. This technology has also been used to develop life-saving vaccines, insulin, cancer treatment and other pharmaceuticals to improve quality of life. It is estimated that in the next 20-30 years demand for food will increase by 70%. Biotechnology will be key to meeting this demand.

This handbook is designed for

*Ash Glazes* Phil Rogers

2003-02-12 Ash glaze, as the name suggests, is a glaze derived from ashes. The earliest such glazes can be traced back to the Shang period in China (c. 1500 B.C.), and it is thought they were produced accidentally, the result of white-hot wood ash being carried through the kiln with the draft of the fire and settling onto the pots, where the searing white heat melted it to a glass. Three thousand years later, wood ash remains an important and immensely popular feature of pottery glaze making. For the modern potter, the satisfaction of working with ash glazes comes from following an ancient tradition as well as from using materials that occur naturally. The results of different wood ashes often vary dramatically, making it possible to achieve a wide range of unique finishes. Even wood from the same species of tree garnered just miles apart can produce subtly

different results. In this second edition of *Ash Glazes*, Phil Rogers covers the history of ash glazes and proceeds to discuss the practicalities of collecting and testing wood ashes and transforming them into glazes. In the final portion of the book, he looks at the work of some leading international potters whose work is typified by the array of finishes that they achieve through their use of wood ash glazes. Images of their work offer an impressive display of the colors and techniques possible through this glazing technique. *Ash Glazes* has been designed as an introduction and practical handbook to the subject. It will provide inspiration for working potters and delight for all those interested in contemporary ceramics.

widely reported accident jeopardized the survival of both. And in his months of recovery, the link between writing and living became more crucial than ever. Rarely has a book on writing been so clear, so useful, and so revealing. *On Writing* begins with a mesmerizing account of King's childhood and his uncannily early focus on writing to tell a story. A series of vivid memories from adolescence, college, and the struggling years that led up to his first novel, *Carrie*, will afford readers a fresh and often very funny perspective on the formation of a writer. King next turns to the basic tools of his trade -- how to sharpen and multiply them through use, and how the writer must always have them close at hand. He takes the reader through crucial aspects of the writer's art and life, offering practical and inspiring advice on everything from plot and character development to work

habits and rejection. Serialized in the *New Yorker* to vivid acclaim, *On Writing* culminates with a profoundly moving account of how King's overwhelming need to write spurred him toward recovery, and brought him back to his life. Brilliantly structured, friendly and inspiring, *On Writing* will empower--and entertain--everyone who reads it.
