On Writing Stephen King 2012 In 1999, Stephen King began to write about his craft -- and his life. By midyear, a widely reported accident jeopardized the survival of both. And in his months of recovery, the link between writing and living became more crucial than ever. Rarely has a book on writing been so clear, so useful, and so revealing. *On Writing* begins with a mesmerizing account of King's childhood and his uncannily early focus on writing to tell a story. A series of vivid memories from adolescence, college, and the struggling years that led up to his first novel, *Carrie*, will afford readers a fresh and often very funny perspective on the formation of a writer. King next turns to the basic tools of his trade -- how to sharpen and multiply them through use, and how the writer must always have them close at hand. He takes the reader through crucial aspects of the writer's art and life, offering practical and inspiring advice on everything from plot and character development to work habits and rejection. Serialized in the *New Yorker* to vivid acclaim, *On Writing* culminates with a profoundly moving account of how King's overwhelming need to write spurred him toward recovery, and brought him back to his life. Brilliantly structured, friendly and inspiring, *On Writing* will empower--and entertain--everyone who reads it.

Plus each character comes with its own back-story. And the results are delicious: meet Pharaoh Thoth Amon, who once ruled Egypt but is now a mummy who practices dark magic in his sarcophagus. Or Zumbie the Zombie, who loves nothing more than a nice plate of brains and yams. NotSoScary, a little monster so useless at frightening people that he has to wear a scary mask. Yucky Chuck, the lunchbox creature born in the deepest depths of your school bag. From Cave Man to Cave Martian Manfred "Dutch" von Ehrenfried 2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather

than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

Richly illustrated with photographs and diagrams and containing new and innovative research this book offers the architect, engineer and student inspiration and technical guidance in this re-emerging material.
