Emb-312 Tucano Joao Paulo Zeitoun Moralez, 2017-07-19 Harpia Publishing is proud to announce the launch of a new title for 2017, *EMB-312 Tucano: Brazil's turboprop success story*, set to become the definitive English-language reference work on this revolutionary Latin American aerospace product. Written by an expert in the field, this book recounts the story of Embraer's EMB-312 turboprop trainer, the first aircraft in its class to offer a cockpit and controls equivalent to its fighter contemporaries, as well enough power to match the high-speed maneuvers of comparable jet trainers. Drawing upon a cadre of authors who are experts in their field, *Carrier Aviation in the 21st Century* continues Harpia's reputation for providing unprecedented detail and extensive technical specifications, as well as detailing the structure of all the air arms and the individual units that currently embark on board carriers. Illustrations include specially commissioned artworks and diagrams to help illustrate how carrier air power remains an essential element of modern warfare.

Emb-314 Super Tucano João Paulo Zeitoun Moralez, 2018-09-19 The Embraer Super Tucano is tough enough to support operations from unprepared runways and in temperatures of 36C and 100% humidity. Flying independently of ground support, it can take off from short and narrow runways to provide support to ground forces. The aircraft integrates a fourth-generation cockpit with some of the most modern technology including datalink, 'hands on throttle and stick' (HOTAS) controls, a head-up display, and night and thermal vision sensors. The crew can deliver up to 1,500kg of conventional and guided weaponry and are provided with ballistic protection. Most other aircraft in its class were developed as advanced trainers before being converted for combat missions. The origins of the single-turboprop EMB-314 Super Tucano are as a robust attack aircraft capable of performing highly varied types of missions, sustaining weeks of continuous operation with high availability. It is almost completely redesigned compared to its predecessor, the EMB-312 Tucano. The two 0.5-in (12.7-mm) machine guns installed in the wings are complemented by a variety of 130 types of armament carried on five external points under the wings and fuselage. With more than 250 examples produced, the Super Tucano performs missions including armed reconnaissance, escort, counterinsurgency and even air defense. It is used by Brazil and 11 other countries and is manufactured under licence in the United States. Afghanistan, Brazil, Colombia, the Dominican Republic and Mauritania have all made operational use of the Super Tucano. The US may become the next operator of the turboprop, with a requirement for as many as 300 new light close air support aircraft.

The Great International Paper Airplane Book Jerry Mander,George Dippel,Howard Luck Gossage,1967 Paper airplanes as serious science? No longer shamefully relegated to the back rows of elementary-school sports stadiums, paper airplanes come into their own with this amusing-and instructive-book. The Great International Paper Airplane Book documents the proceedings of the first (and possibly only) International Paper Airplane Competition conducted by Scientific American. In addition to the behind-the-scenes story and official records of the Competition, readers will discover intriguing mini-essays on the historical, aesthetic, technological, and folkloric aspects of the paper airplane and on its startling implications for the future of aviation. Best of all, there are dozens of cut-fold-and-fly-them-yourself planes to experiment with. Combining real science with outright fun, this book appeals to paper airplane enthusiasts and would-be aviators of every age.

Export Pioneers in Latin America Charles F. Sabel,2012 Why do some export activities succeed while others fail? Here, research teams analyze export endeavors in Latin American countries to learn how export pioneers are born and jump-start a process leading to economic transformation. Case studies range from blueberries in Argentina and flowers in Colombia to aircraft in Brazil and software in Uruguay.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum

performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Afghanistan Kenneth Katzman, 2008 U.S. and outside assessments of the effort to stabilise Afghanistan are mixed and subject to debate; the Administration notes progress on reconstruction, governance and security in many areas of Afghanistan, particularly the U.S.-led eastern sector of Afghanistan. However, a November 2007 Bush Administration review of U.S. efforts in Afghanistan reportedly concluded that overall progress was inadequate. This mirrors recent outside studies that contain relatively pessimistic assessments, emphasising a growing sense of insecurity in areas previously considered secure, increased numbers of suicide attacks, and increasing aggregate poppy cultivation, as well as increasing divisions within the NATO alliance about the relative share of combat among the nations contributing to the peacekeeping mission. Both the official U.S. as well as outside assessments are increasingly pointing to Pakistan as failing -- either through lack of attention or eliberate strategy -- to prevent Taliban commanders from operating from Pakistan. To try to gain momentum against the insurgency, the United States is considering new initiatives including adding U.S. troops to the still combat-intense south, possibly assuming U.S. command of the southern sector, and increasing direct U.S. action against Taliban concentrations inside Pakistan. Politically, the Afghan government remains reasonably stable. The post-Taliban transition was completed with the convening of a parliament in December 2005; a new constitution was adopted in January 2004, successful presidential elections were held on October 9, 2004, and parliamentary elections took place on September 18, 2005. The parliament has become an arena for factions that have fought each other for nearly three decades to debate and peacefully resolve differences, as well as a centre of political pressure on President Hamid Karzai. Major regional

strongmen have been marginalised. Afghan citizens are enjoying personal freedoms forbidden by the Taliban, and women are participating in economic and political life. Presidential elections are to be held in the fall of 2009, with parliamentary and provincial elections to follow one year later. To help stabilise Afghanistan, the United States and partner countries are deploying a 47,000 troop NATO-led International Security Assistance Force (ISAF) that now commands peacekeeping throughout Afghanistan, including the restive south. Of those, 19,000 of the 31,000 U.S. forces in Afghanistan are part of ISAF. The U.S. and partner forces also run regional enclaves to secure reconstruction (Provincial Reconstruction Teams, PRTs), and are building an Afghan National Army and National Police. The United States has given Afghanistan over \$23 billion (appropriated, including FY2008 to date) since the fall of the Taliban, including funds to equip and train Afghan security forces.

Transfer of Technology for Successful Integration Into the Global Economy United Nations, UNCTAD/UNDP Programme on Globalization, Liberalization and Sustainable Human Development, 2003 This publication contains three case studies which seek to disseminate information on best practices for promoting transfer of technology in developing countries, in order to help establish new industries which can successfully compete in the global economy. These studies were carried out under the UNCTAD/UNDP Programme on Globalization, Liberalization and Sustainable Human Development, and deal with aircraft manufacturing in Brazil, the pharmaceuticals sector in India and the automobile industry in South Africa.

Global Latinas Lourdes Casanova, 2009-02-27 Most of the research on multinationals has focused on companies from developed markets. Research on multinationals from emerging economies is relatively new and most of the attention has been focused on multinationals from Asia. Little research has been done on the internationalization strategies and challenges of Latin American multinationals. This book aims to fill this void. Studying Latin American multinationals will not only provide insights into specific strategies deployed by successful firms but will also identify best practices that can be employed by the next generation multinationals from emerging markets. --Book Jacket.

The Alliance Revolution Benjamin Gomes-Casseres, 1996 More than we ever anticipated, alliances among firms are changing the way business is conducted, particularly in the global, high-technology sector. The reasons are clear: companies must increasingly pool their capabilities to succeed in ever more complex and rapidly changing businesses. But the consequences for managers and for the economy have so far been underestimated. In this new book, Benjamin Gomes-Casseres presents the first in-depth account of the new world of business alliances and shows how collaboration has become part of the very fabric of modern competition. Alliances, he argues, create new units of competition that do battle with one another and with traditional single firms. The flexible capabilities of these multi-firm constellations give them advantages over single firms in certain contexts, offsetting the advantage of a single firm's unified control. When managed effectively, alliances can strengthen a firm's competitive advantage and narrow the gap between leading firms and second-tier players. This often results in intensified rivalry, and the competition within an industry is transformed. Alliances often spread swiftly through an industry as firms jockey for advantage. Yet the very spread of alliances increases their costs and poses new limits on their use. Gomes-Casseres concludes that firms need to manage their constellations to enhance collaboration within their groups, while raising what he calls barriers to collaboration for rivals. These ideas are developed and illustrated through original case studies of alliances among U.S., Japanese, and European firms in electronics and computers, including Xerox, IBM, and Fujitsu as well as other small and large companies. The book should be of interest to business academics, managers, and general readers concerned with contemporary capitalism.

Proliferation of Weapons- and Dual-Use Technologies Margaret E. Kosal, 2021-07-26 This book explores and analyzes the rapid pace of technological evolution in diplomatic, information, military, and economic sectors, which has contributed to a dynamic international policy environment. Global political stability is greatly influenced by innovations originating from numerous sources, including university labs, the technology sector, and military research. Collectively, these innovations guide the movement of people, ideas, and technology that in turn affect the international balance of power. The objective of this volume is to develop new insights into how the proliferation of innovative ideas, low-cost weapons, and dual-use technologies impact the changing global security landscape. Innovative and dual-use technologies can be used for beneficial purposes or defensive purposes. Alternatively they may be appropriated or employed for nefarious purposes by hostile military powers and non-state actors alike. Such actions can threaten global security and stability. As the complexity of technological innovations continues to increase, existing control mechanisms such as

international regulations and security arrangements may be insufficient to stem the tide of proliferation over time. As such, this works seeks to assess and present policy solutions to curtail the threat to global stability posed by the proliferation of weapons and dual-use technology.

Mali's Next Battle Michael Shurkin, Stephanie Pezard, S. Rebecca Zimmerman, 2017-04-19 This report examines Mali's counterterrorism requirements in light of recent evolutions in the country's security environment. In spite of the achievements of France, the United Nations, and the European Union, the terrorist threat in Mali is growing, but Mali's military remains largely ineffective. Part of the challenge is the interconnected nature of Mali's terrorist problem and the political strife that afflicts Mali's northern half, which the peace agreement signed in Algiers in June 2015 only somewhat addresses. Moreover, Bamako's response remains focused to an inappropriate degree on acquiring the military capabilities it hopes will help redress the balance of power in the North while leveraging proxy ethnic militias. These militias, though more effective on the battlefield than Mali's own forces, have the potential to further aggravate northern Mali's instability. The report argues that it is not possible to strengthen Mali's counterterrorism capabilities in isolation from its general military capabilities, which are in need of fundamental reforms. Such reforms should include making the armed forces more inclusive of minority groups and more attentive to relations with northern communities, improving the effectiveness and accountability of defense institutions, building human capital and leadership, and enhancing operational capabilities. In all cases, the United States must coordinate its efforts with the other actors on the ground in Mali, especially the French and the European Union, to ensure complementarity.--Publisher's web site.
