Handprints on Hubble Kathryn D. Sullivan,2019-11-05 The first American woman to walk in space recounts her experience as part of the team that launched, rescued, repaired, and maintained the Hubble Space Telescope The Hubble Space Telescope has revolutionized our understanding of the universe. It has, among many other achievements, revealed thousands of galaxies in what seemed to be empty patches of sky; transformed our knowledge of black holes; found dwarf planets with moons orbiting other stars; and measured precisely how fast the universe is expanding. In *Handprints on Hubble*, retired astronaut Kathryn Sullivan describes her work on the NASA team that made all this possible. Sullivan, the first American woman to walk in space, recounts how she and other astronauts, engineers, and scientists launched, rescued, repaired, and maintained Hubble, the most productive observatory ever built. Along the way, Sullivan chronicles her early life as a "Sputnik Baby," her path to NASA through oceanography, and her initiation into the space program as one of "thirty-five new guys." (She was also one of the first six women to join NASA's storied astronaut corps.) She describes in vivid detail what liftoff feels like inside a spacecraft (it's like "being in an earthquake and a fighter jet at the same time"), shows us the view from a spacewalk, and recounts the temporary grounding of the shuttle program after the Challenger disaster. Sullivan explains that "maintainability" was designed into Hubble, and she describes the work of inventing the tools and processes that made on-orbit maintenance possible. Because in-flight repair and upgrade was part of the plan, NASA was able to fix a serious defect in Hubble's mirrors—leaving literal and metaphorical "handprints on Hubble." *Handprints on Hubble* was published with the support of the MIT Press Fund for Diverse Voices.

Young People Re-Generating Politics in Times of Crises Sarah Pickard,Judith Bessant,2017-07-31 This book provides insight into the diverse ways young people from around the world are regenerating politics in innovative and multifaceted ways. The authors, who include academics and activists, challenge claims that young people are apolitical, apathetic and living up to the 'me generation' stereotype. Contributions cover a rich body of case examples of traditional and new forms of youth politics in response to situated injustices and political and socio-economic crises. Significant and optimistic, the collection presents strong evidence from across the globe that these developments are not isolated incidences, but are in fact part of a systemic, large-scale transformation leading to a regeneration of the political landscape by young people. The book is aimed at students and scholars in the fields of politics, sociology, policy studies and youth and childhood studies.

Basics of Virtual Reality Armin Grasnack,2022-01-04 Today, the reality we know can be recorded and reproduced true to reality using technical processes. Space and time are recreated virtually as a copy in artificial reality. However, the reproduction of virtual reality is not limited to a mere copy of what exists. A visitor to the virtual space does not have to be content with the pixelated image of the old familiar, but can encounter unreal phenomena in the illusory world that never existed in real life or are even physically impossible. This enables an expansion of the recorded reality and allows the perception of surprisingly new perspectives. A perspective denotes the perception of a fact from a certain point of view and corresponds to the way of looking at things. But a perspective is also the observation of a scene from a viewing position. From different perspectives the illusion of reality arises during the reproduction by observation. This vision is not based on imagination or hallucination, but is the basic function of virtual reality. This book describes the concepts, systems, and technologies used to create virtual reality from its ancient beginnings to the present, and provides a glimpse into a possible future. This book is a translation of the original German 1st edition *Grundlagen der virtuellen Realität* by Armin Grasnack, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on

the related technologies to support the authors.

Women and Information Technology J. Artwear Melissa Leventon, 2005-04-26 A colorful survey of the often provocative and always highly creative relationship between art and fashion. A crocheted wool coat of exuberant textures and glowing colors, a dyed and pleated silk vest of baroque sensuousness, a headdress of ribbon intricately ruched in the shape of a leaping fish, an evening gown made from shredded dollar bills, a kimono that carries art appliqué on its sleeve—these are just a few of the beautiful, imaginative, even surreal works of wearable art included in this richly illustrated book, published to accompany an exhibition at the Fine Arts Museums of San Francisco. Melissa Leventon shows that wearable art is the latest in the long line of aesthetic dress reforms that began with the Arts and Crafts movement. She then traces the history of this art form as it developed out of the hippie styles and studio fiber art of the 1960s and 1970s until today, highlighting many of the leading practitioners and discussing its characteristic forms and processes. The works brought together range from pieces that are only technically wearable to one-of-a-kind works that are at home either on one's back or on one's wall to limited-edition luxury clothing. Artwear will be invaluable to fashion designers and students, art and textiles professionals, craftspeople, and anyone with an interest in the fashion world. Curator of Textiles at the Fine Arts Museums of San Francisco from 1992 to 2002, Melissa Leventon is now an independent consultant specializing in costumes and textiles.

From Cave Man to Cave Martian Manfred "Dutch" von Ehrenfried, 2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

Achtung-Panzer! Heinz Guderian, 1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Web Cartography Jan-Menno Kraak, Allan Brown, 2003-09-02 Maps and atlases are created as soon as information on our geography has been clarified. They are used to find directions or to get insight into spatial relations. They are produced and used both on paper as well as on-screen. The Web is the new medium for spreading and using maps. This book explains the benefits of this medium from the perspective of the user, and the map provider. Opportunities and pitfalls are illustrated by a set of case-studies. A website accompanies the book and provides a dynamic environment for demonstrating many of the principles set out in the text, including access to a basic course in Internet cartography as well as links to other interesting places on the Web. Professor Kraak looks at basic questions such as I have this data what can I do with it? and discusses the various functions of maps on the web. Web Cartography also looks at the particularities of multidimensional web maps and addresses topics such as map contents (colour, text and symbols), map physics (size and resolution), and the map environment (interface design/site contents).
