Biplanes, Triplanes & Seaplanes Jim Winchester 2004 Biplanes and seaplanes dominated early aviation. The flying surfaces on biplanes added strength to the structure and provided extra lift to compensate for comparatively small engines, while seaplanes were favored for the unlimited space water provided for long take-off runs. This is an extensive guide to more than 120 biplanes, triplanes, and seaplanes, from early designs such as the Wright Flyer to jet flying boats and timeless classics like the Tiger Moth and the Curtiss JN-4 "Jenny." 600 color and archival black-and-white photographs are featured in this extraordinary book.

Anglo-American Establishment Carroll Quigley 2013-11 Professor Carroll Quigley presents crucial "keys" without which 20th century political, economic, and military events can never be fully understood. The reader will see that this applies to events past-present-and future. "The Rhodes Scholarships, established by the terms of Cecil Rhode's seventh will, are known to everyone. What is not so widely known is that Rhodes in five previous wills left his fortune to form a secret society, which was to devote itself to the preservation and expansion of the British Empire. And what does not seem to be known to anyone is that this secret society ... continues to exist to this day. ... This group is, as I shall show, one of the most important historical facts of the twentieth century." -Quigley

Electric Airplanes and Drones Kevin Desmond 2018-09-14 Attempts at electric powered flight date to well before the 19th century. Battery weight and low energy output made it impractical until the 1990s, when the advent of lightweight materials, more efficient solar power, improved engines and the Li-Po (lithium polymer) battery opened the skies to a wide variety of electric aircraft. The author describes the diverse designs of modern electric flying machines—from tiny insect-styled drones to stratospheric airships—and explores developing trends, including flying cars and passenger airliners.

Gustave Trouv Kevin Desmond 2015-06-15 In the latter half of the 19th century, Gustave Pierre Trouvé, a modest but brilliant Parisian electrical engineer, conceived and patented some 75 inventions, including the endoscope, the electric car and the frontal headlamp. He also designed an electric boat—complete with outboard motor, headlight and horn—an electric rifle, an electric piano and luminous fountains, and developed wearable technology and ultraviolet light therapy. Unlike his famous contemporary Nikola Tesla, who worked for Thomas Edison and was patronized by George Westinghouse, Trouvé never came to America. A confirmed bachelor disinterested in industrialization, he was gradually forgotten following his accidental death in 1902. This expanded edition of the 2012 French first-ever biography of Trouvé details the fascinating life of the Chevalier of the Legion of Honor once dubbed “the French Edison.”

Food Crises and the WTO Baris Karapinar 2010-04-08 The food and financial crises of 2008 and 2009 have pushed millions more people into poverty and hunger, while changing the parameters of international trade. Both crises have also challenged the fundamentals of WTO rules regulating agriculture, which had been designed to combat trade distortions due to artificially low-priced food commodities. This collection of essays examines to what extent the multilateral trading system contributes to food security in today's volatile markets. Bringing together a renowned group of expert economists, lawyers, environmental and development specialists, it offers a fresh and multi-dimensional perspective combining a strong economic analysis with a comprehensive legal assessment of the interface between food security and international trade regulation. Together, the contributions provide concrete policy recommendations on how the WTO could play a positive role in preventing or mitigating future food crises and promote global food security.
