I-16 Rata Oleg Pototskiy,2021-08-31 This book introduces the reader to a remarkable fighter aircraft, that which had a great influence on both the pre-war development of Soviet aircraft, and the military developments that occurred in the first few months of the war between Germany and the USSR.

King of Fighters -- Nikolay Polikarpov and His Aircraft Designs Mikhail Maslov,2021-01-19 In the century-long history of the conquest of the sky there have been a number of outstanding personalities. Among them is the name of designer Nikolay Polikarpov (1892-1944), which is inseparably associated with the best achievements of the Russian and Soviet aviation. His practical activity in the aircraft industry began upon graduation from the Petersburg Polytechnic Institute in 1916. Aged 25, Polikarpov was sent to the Russo-Baltic Wagon Factory (RBWF), where the four-engined Ilya Muromets bombers designed by Igor Sikorsky were being built at that time. Later, beginning from August 1918, he worked in Moscow at the Dux aircraft factory. For several years, he was engaged in improving products manufactured by the factory, and upgrading production aircraft to accommodate the available engines, equipment and materials. From 1922, Polikarpov focused his attention on fighter aircraft, creation of which was a priority for him during the following years. The first of them was the IL-400 monoplane, designated I-1 by the Air Force. The monoplane was followed by biplanes including the 2I-N1 (1925), the I-3 (1927), the D-2 (1928), and the I-6 (1929). It was specialization in fighter aircraft which, from then on, became his mission in life. At the peak of his career as a designer, Polikarpov was informally styled 'the King of Fighters', which was quite in line with the level of his merits and achievements. In the 1930's, the TsKB-3 (I-15) and TsKB-12 (I-16) fighters were designed under Polikarpov's supervision. These aircraft were the designer's undoubtable success. They also were the main combat fighters in service with the Red Army Air Force. For the creation of the I-15 and the I-16 fighters, Polikarpov was awarded the Order of Lenin in 1935, and the Order of the Red Star a year later. In the 1930's, Nikolay Polikarpov devised a lot of aircraft of various designs, the majority of which can be described as 'advanced' and 'innovative'. In 1940, Polikarpov was granted the degree of the Doctor of Engineering and the title of the Chief Designer of the highest category. In the same year, he was awarded the title of the Hero of Socialist Labor. A year later, he became a recipient of the Stalin Prize. The gifted Soviet engineer was destined to live only 52 years. On 30 July 1944, Nikolay Polikarpov died of a rapidly evolving oncological disease. To venerate his memory, the U-2 trainer has ever since been designated the Po-2 (Polikarpov-2). The book which is presented to the reader describes all Polikarpov's original projects, both those put into reality and unimplemented ones. It took the author many years to prepare for the creation of the book. The author studied materials on the respective topics in all Russian archives, and made use of remembrances of Polikarpov's contemporaries and publications by other researchers. For purposes of clarity and in order to facilitate publication, the author split the book on Nikolai Polikarpov's aircraft into two parts - the 'Biplane Era' and the 'Monoplane Era'. Indeed, during the designer's activity from 1918 through to 1932, he devoted himself predominantly to creating biplanes. For the 1920's, the biplanes were a preferable option; they were more common, more reliable, better studied, and even more desirable for the Red Army Air Force. The first design of the IL-400 (I-1) monoplane fighter appeared as early as 1923; however, it was through its novelty and unpredictability that the aircraft failed to achieve the deserved success. It should be noted that the U-2 (Po-2) and the R-5 biplanes, which were created during that period, became one of the best Polikarpov aircraft, and brought him recognition as a reputed designer. In the 1930's, Nikolai Polikarpov's activity reached its pinnacle. It was during that period that he created his advanced monoplanes such as the I-16, the I-17, the VIT-2, and others. He continued his fruitful and quite successful activity in the area of creating modern aircraft during the war of 1941--45 as well.

The Chinese Air Force Richard P. Hallion,Roger Cliff,Phillip C. Saunders,Center for the Study of Chinese Military Affairs (National Defense University),2012-10-03 Presents revised and edited papers from a October 2010 conference held in Taipei on the Chinese Air Force. The conference was jointly organized by Taiwan's Council for Advanced Policy Studies, the Carnegie Endowment for International Peace, the U.S. National Defense University, and the RAND Corporation. This books offers a complete picture of where the Chinese air force is today, where it has come from, and most importantly, where it is headed.

Energiya-Buran Bart Hendrickx,Bert Vis,2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

Buy, Build, Or Steal Phillip Charles Saunders,Joshua K. Wiseman,2011 This study identifies potential aviation technology development and procurement strategies, presents a general model of the options available to developing countries, and applies that model to explain Chinese procurement and aviation technology acquisition efforts over the last 60 years. The model articulates three main technology procurement avenues: purchase (buy), indigenous development (build), and espionage (steal), and three subavenues: reverse engineering (combining buy/steal and build), coproduction (combining buy and build), and codevelopment (combining buy and build, with an emphasis on build). It examines the costs, benefits, and tradeoffs inherent in each approach. Four variables influence decisions about the mix of strategies: (1) a country's overall level of economic development, in particular the state of its technical/industrial base; (2) the technological capacity of a country's military aviation sector; (3) the willingness of foreign countries to sell advanced military aircraft, key components, armaments, and related production technology; and (4) the country's bargaining power vis-avis potential suppliers.

The Spy Who Changed History Svetlana Lokhova,2019-10-01 On a sunny September day in 1931, Soviet spy Stanislav Shumovsky walked down the gangplank of the SS Europa and into New York, concealed in a group of 65 Soviet students. Joseph Stalin had sent him to acquire American secrets to help close the USSR's yawning technology gap, and the road to victory began in the classrooms and laboratories of MIT.Using information gleaned from this mission, the USSR first transformed itself into a military powerhouse able to defeat Nazi Germany. Then in 1947, American innovation exfiltrated by Shumovsky made it possible to build and unveil the most advanced strategic bomber in the world. Later , other MIT-trained Soviet spies would go on to acquire the secrets of the Manhattan Project.In this thrilling history, Svetlana Lokhova takes the reader on a journey through Stalin's most audacious intelligence operation, piecing together every aspect of Shumovsky's life and character using

information derived from American and Russian archives.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Russian Second-language Textbooks and Identity in the Universe of Discourse Olga M. Mladenova, 2004 This book provides an overview of the changes of the Second-Language Learning discursive formation and the Identity discursive formation in Russian history. It proposes an explanatory model in which small-scale linguistic detail is joined with larger-scale language units in order to illuminate matters of cultural importance in their linguistic guise.

Boulton Paul Alec Brew, 2001 This book records the aeronautical activities of this Norfolk-based company, with a brief history of its origins by William Moore in 1797, and its work during the First World War. It pioneered metal construction after the war and produced parts for the R-101 airship. As Boulton Paul Aircraft Ltd at Wolverhampton, the Defiant was conceived, and its gun turrets would defend RAF bombers during WWII.

Entangled Life Merlin Sheldrake, 2021-04-13 NEW YORK TIMES BESTSELLER • A “brilliant [and] entrancing” (The Guardian) journey into the hidden lives of fungi—the great connectors of the living world—and their astonishing and intimate roles in human life, with the power to heal our bodies, expand our minds, and help us address our most urgent environmental problems. “Grand and dizzying in how thoroughly it recalibrates our understanding of the natural world.”—Ed Yong, author of *An Immense World* ONE OF THE BEST BOOKS OF THE YEAR—Time, BBC Science Focus, The Daily Mail, Geographical, The Times, The Telegraph, New Statesman, London Evening Standard, Science Friday When we think of fungi, we likely think of mushrooms. But mushrooms are only fruiting bodies, analogous to apples on a tree. Most fungi live out of sight, yet make up a massively diverse kingdom of organisms that supports and sustains nearly all living systems. Fungi provide a key to understanding the planet on which we live, and the ways we think, feel, and behave. In the first edition of this mind-bending book, Sheldrake introduced us to this mysterious but massively diverse kingdom of life. This exquisitely designed volume, abridged from the original, features more than one hundred full-color images that bring the spectacular variety, strangeness, and beauty of fungi to life as never before. Fungi throw our concepts of individuality and even intelligence into question. They are metabolic masters, earth makers, and key players in most of life’s processes. They can change our minds, heal our bodies, and even help us remediate environmental disaster. By examining fungi on their own terms, Sheldrake reveals how these extraordinary organisms—and our relationships with them—are changing our understanding of how life works. Winner of the Wainwright Prize, the Royal Society Science Book Prize, and the Guild of Food Writers Award • Shortlisted for the British Book Award • Longlisted for the Rathbones Folio Prize

Critical Metals Handbook Gus Gunn, 2014-01-06 Mankind is using a greater variety of metals in greater quantities than ever before. As a result there is increasing global concern over the long-term availability of secure and adequate supplies of the metals needed by society. Critical metals, which are those of growing economic importance that might be susceptible to future scarcity, are a particular worry. For many of these we have little information on how they are concentrated in the Earth’s crust, how to extract them from their ores, and how to use, recycle and dispose of them effectively and safely. Published with the British Geological Survey, the Critical Metals Handbook brings together a wealth of knowledge on critical metals and provides a foundation for improving the future security and sustainability of critical metal supplies. Written by international experts, it provides a unique source of authoritative information on diverse aspects of the critical metals, including geology, deposits, processing, applications, recycling, environmental issues and markets. It is aimed at a broad non-specialist audience, including professionals and academics working in the exploration and mining sectors, in mining finance and investment, and in mineral processing and manufacturing. It will also be a valuable reference for policy makers concerned with resource management, land-use planning, eco-efficiency, recycling and related fields.

The Environmental Behaviour of Polonium International Atomic Energy Agency, 2018-01-31 Polonium-210 is an alpha emitting radionuclide with no radioactive progeny and produces only very-low-intensity gamma rays at very low abundance. This means doses largely arise from internal exposure. In addition to the relatively high ingestion dose coefficient of ^{210}Po , radionuclide transfer in the environment results in high activity concentrations in certain foods. This publication focuses on radionuclide transfers in terrestrial, freshwater and marine environments, and provides information on key transfer processes, concepts and models—back cover.

The Politicization of Russian Orthodoxy Anastasia V Mitrofanova, 2005-07-26 This book analyzes the ideologies of politicized Orthodox Christianity in today Russia including fundamentalism, pan-Slavism, neo-Eurasianism, Orthodox communism and nationalism. Apart from textual analysis, the volume provides a description of the specific subculture of political Orthodoxy, i.e. its language, symbols, art, mass media, hangouts and dresscode. This study represents the first scholarly examination of these topics. Unlike other publications on the politicization of Orthodoxy, it is focused not on the political ambitions of the Russian Orthodox Church (ROC), but on political movements ideologically based on their own interpretations of the Orthodox doctrine, often contravening the canonical version. The book demonstrates that the “political Orthodox” or “Orthodox patriots” are a specific branch of believers who frequently do not practice Orthodoxy properly, inventing, instead, their own quasi-Orthodox rituals. The volume shows that the ROC is not responsible for such religious politicization and that the community of the political Orthodox is rather guided by religiously oriented lay intellectuals. The book provides a brief analysis of this intellectual community. Finally, the volume demonstrates that, even in

the absence of significant electoral achievements, some religio-political Orthodox movements—namely, fundamentalists and nationalists—have been able to gain public support at the grassroots level. They have been able to infiltrate larger and more moderate political organizations thus contributing to a general “Orthodoxization” of Russian political discourse.

Vânător Radu Brînzan,2014 A detailed and comprehensive illustrated technical history of the I.A.R.80 and I.A.R.81 - Romanian World War II fighter and ground-attack aircraft. This elegant but little-known aircraft was the mainstay of the Romanian air force's fighter arm throughout WW2, involved in fighting against both the Allies and then against the Axis. It was heavily involved in aerial battles against USAAF heavy bombers attacking Romanian oil fields. The different versions of the plane are described and illustrated; all the changes in specification, equipment and performance are recorded. Drawings and data from the original technical manuals, full dimensional details and photographs of the few surviving relics preserved in aviation museums illustrate all aspects of the airframe, inside and out. Color photographs and many pages of color illustrations complete the book's comprehensive coverage. 60 color profiles. Profusely illustrated with photos, including walk-around section showing all aspects of the airframe, and diagrams from official manuals. Includes accurate 1/48th scale plans, and color profiles showing many of the colorful schemes applied to the aircraft.

The Petlyakov Pe-2 Peter C. Smith,2020-03-30 The definitive book on the development and deployment of the Soviet Union’s supreme dive-bomber—with rare archival and private photos. During the Second World War, the Petlyakov Pe-2 Peshka was the Soviet Union’s main dive- and light-bomber in operations across the Eastern Front. It became a mainstay of the Soviet counteroffensive that led to the fall of Berlin. They also led the way in the brief but annihilating Manchurian campaign against Japan in the closing days of the war in 1945. Conceived by a team of top aircraft designers whom Stalin had incarcerated on political charges, the Peshka had originally been designed as a high-altitude twin-engine fighter plane. But due to the outstanding success of the German Stukas in the Blitzkrieg, it was quickly transformed into the fastest dive-bomber in the skies. Only a handful had reached front lines by the start of Operation Barbarossa in June 1941. But by 1945, more than 11,000 of the type were built, including many variants. Many of these remained in service with the air forces of Yugoslavia and the Warsaw Pact countries into the 1950s. Using official sources, including the official Pe-2 handbook, as well as rare color and black-and-white photographs from both official and private collections, this is the definitive record of the Pe-2.

Britain's War: A New World, 1942-1947 Daniel Todman,2020-03-17 The second volume of Daniel Todman's account of Great Britain and World War II The second of Daniel Todman's two sweeping volumes on Great Britain and World War II, *Britain's War: A New World, 1942-1947*, begins with the event Winston Churchill called the worst disaster in British military history: the Fall of Singapore in February 1942 to the Japanese. As in the first volume of Todman's epic account of British involvement in World War II (Total history at its best, according to Jay Winter), he highlights the inter-connectedness of the British experience in this moment and others, focusing on its inhabitants, its defenders, and its wartime leadership. Todman explores the plight of families doomed to spend the war struggling with bombing, rationing, exhausting work and, above all, the absence of their loved ones and the uncertainty of their return. It also documents the full impact of the entrance into the war by the United States, and its ascendant stewardship of the war. *Britain's War: A New World, 1942-1947* is a triumph of narrative and research. Todman explains complex issues of strategy and economics clearly while never losing sight of the human consequences--at home and abroad--of the way that Britain fought its war. It is the definitive account of a drama which reshaped Great Britain and the world.

Japanese Secret Projects Edwin M. Dyer,2009 Surprisingly, secret Japanese planes of World War II remain an area that has been largely ignored due to scarcity of information. They do, however, have a large base of interest as unlike the majority of secret Luftwaffe programs that were resigned to the drawing board, the vast number of aircraft featured within this book actually flew or were in development. The book begins with an overview of the IJN and IJA through the early years to 1945, and their secret technical exchanges with the Luftwaffe throughout the war. It is divided into two sections dedicated to the two armed forces, with a total of 34 aircraft examined, each with its history, performance, and combat records laid out in an easy to read fashion. The book provides photographs, technical drawings, and stunning color renditions of the aircraft in combat. Notable emphasis is placed upon the supersonic kamikaze aircraft, the Amerika bomber, and the ways in which the Japanese improved on German technology, particularly the Me 262 and Komet. Secret Japanese armaments are also covered in detail, with information uncovered on guided missiles, rockets, and cannons. A gripping read for aviation and military enthusiasts around the world!

Spitfire V vs C.202 Folgore Donald Nijboer,2014-04-20 The inability of the Italians and Germans to invade Malta proved decisive for Allied victory in the Mediterranean during World War II, as the islands provided the Allies with a base from which to project air power. Early Italian efforts to pound the islands into submission were supplemented by major German forces from January 1942 and in a few weeks the situation for the defenders reached a critical stage; in response, in March 1942 the first Spitfires were delivered to Malta. Throughout the summer C.202s fought over Malta, escorting tiny formations of Cant Z.1007s, SM.79s and Ju 88s. The fighting subsided in August and September, but grew in strength with the arrival of more C.202s. In October the Regia Aeronautica could muster three Gruppi with a total of 74 C.202s. For ten days the Italians pressed a relentless attack before attrition brought the offensive to a halt. Throughout the bombing campaign the British were able to supply Malta with ever increasing numbers of Spitfires.

"Smart Technologies" for Society, State and Economy Elena G. Popkova,Bruno S. Sergi,2020-10-15 This proceedings book presents a comprehensive view of “smart” technologies and perspectives of their application in various areas of economic activity. The authors of the book combined the results of the cutting-edge research on the topic of “smart” technologies in the digital economy and Industry 4.0 and developed a unified scientific concept. The current experience has been considered, and the prospects for the application of “smart” technologies in society to promote social advance have been identified. “Smart” technologies in public administration and law, as well as the experience in development of e-government, have been examined. “Smart” technologies in business activity have been studied, and the transition

from digital business to business 4.0 has been justified. The book contains the collection of the best works following the results of the 13th International Research-to-Practice Conference “Smart Technologies” for society, state and economy which was run by the Institute of Scientific Communications (ISC) and was held on July 2–3, 2020. The target audience of this book includes researchers investigating fundamental and applied problems of development of “smart” technologies, as well as concerned parties outside the academic community, in particular, representatives of the digital society, high-tech business entities and officials regulating the digital economy and Industry 4.0.
