The New Silk Road Becomes the World Land-Bridge Helga Zepp-LaRouche, Michael O. Billington, Ramtanu Maitra, Dennis Small, Bruce Director, Jason Ross, Paul Gallagher, Hussein Askary, Rachel Douglas, Benjamin Deniston, 2014-12 EIR RELEASES ROAD-MAP TO THE NEW WORLD ECONOMIC ORDER: THE NEW SILK ROAD BECOMES THE WORLD LAND-BRIDGE EIR's comprehensive study of the progress of the Eurasian Land-Bridge project which Lyndon and Helga LaRouche have championed for over 20 years, has finally been completed. The official release date is Dec. 1. The 374-page report, entitled *The New Silk Road Becomes the World Land-Bridge*, "is nothing less than a conceptual, and often physical, road-map" to a New World Economic Order. This path is currently being charted by the nations of the BRICS (Brazil, Russia, India, China, and South Africa), who are leading a dynamic of global optimism toward real economic development, complete with new credit institutions and major high-technology projects for uplifting all mankind. After an introduction by Helga Zepp-LaRouche, the report lays out the Metrics of Progress, based on the economic scientific principles developed by renowned physical economist Lyndon LaRouche. It then proceeds region by region, beginning with China and Russia, to present the stunning progress, and plans, which have been made toward the Eurasian Land-Bridge design that the Chinese government laid out in 1996, and other nations have begun to rally behind in recent years. The report, complete with many full-color maps of its featured development corridors, is available in paperback for \$50 and hard cover bound for \$75.

Medical Geology Olle Selinus, Robert B. Finkelman, Jose A. Centeno, 2010-06-27 Medical Geology is a rapidly growing field concerned with the relationship between natural geological factors and human and animal health, as well as with improving our understanding of the influence of environmental factors on the geographical distribution of health problems. This book brings together the work of geoscientists and medical/public health researchers, which addresses health problems caused, or exacerbated by geological materials (rocks, minerals, atmospheric dust and water) and processes (including volcanic eruptions and earthquakes. Among the environmental health problems discussed in this book are: exposure to toxic levels of trace essential and non-essential elements such as arsenic and mercury; trace element deficiencies; exposure to natural dusts and to radioactivity; naturally occurring organic compounds in drinking water; volcanic emissions, etc. The text also deals with the many health benefits of geologic materials and processes. This wide-ranging volume covers issues in medical geology all over the world with each author covering their respective region. It provides examples from different continents as well as a state-of-the-art review of the latest developments in the discipline. The authors are all recognized geoscientific and medical experts working in the field. The book is written for a wide variety of specialists from geologists, geochemists, pathologists and medical doctors to veterinarians and biologists.

*Industry Competitiveness: Digitalization, Management, and Integration* Aleksei V. Bogoviz, Yulia V. Ragulina, 2020-02-24 This book, with contributions by both leading scholars and industry experts,

provides a coherent framework for understanding complex determinants and patterns of industry competitiveness. Divided into eight parts, it covers both quantitative and qualitative research on the following topics: technologies, economic development, and human resources in Industry 4.0; management in the digital economy; artificial intelligence and knowledge management approaches; drivers of sustainable and innovative development in corporations; resilient and competitive systems in the energy sector; compliance and anti-corruption mechanisms; and competence networks and technological integration. Thanks to its highly stimulating discussions on the determinants and patterns of industry competitiveness, this book appeals to a wide readership.

*Global Gold Production Touching Ground* Boris Verbrugge, Sara Geenen, 2020-05-04 In recent decades, gold mining has moved into increasingly remote corners of the globe. Aside from the expansion of industrial gold mining, many countries have simultaneously witnessed an expansion of labor-intensive and predominantly informal artisanal and small-scale gold mining. Both trends are usually studied in isolation, which contributes to a dominant image of a dual gold mining economy. Counteracting this dominant view, this volume adopts a global perspective, and demonstrates that both industrial gold mining and artisanal and small-scale gold mining are functionally integrated into a global gold production system. It couples an analysis of structural trends in global gold production (expansion, informalization, and technological innovation) to twelve country case studies that detail how global gold production becomes embedded in institutional and ecological structures.

**Gulf Military Forces in an Era of Asymmetric Wars** Khalid Al-Rodhan, Anthony H. Cordesman, 2006-12-30 The significance of the Persian Gulf to international peace and security and to the global energy market cannot be overstated. Events such as the attacks of September 11 and the rise in energy demand and prices have only highlighted the importance of stability in the Gulf to the health of the global economy. This book demonstrates that the nature of military and political threats in the Gulf states (Bahrain, Saudi Arabia, Iran, Iraq, Qatar, Yemen, and the UAE) has shifted during the past three years. Although the threat from Saddam Hussein's Iraq, which produced three recent, major conventional wars-Iran-Iraq (1980-88), Persian Gulf (1990), and Iraq (2003)-has largely disappeared, it has been replaced by concerns over the asymmetric warfare conducted by terrorist organizations and over the proliferation of WMDs by both states and terrorists. These developments are affecting the defense planning and strategic posture of each country, and this book analyzes developments in the force structures of the Gulf states and their ability to deal with this shift in the nature of the threat. The military and security forces of the Gulf states must evolve to adapt to the changing nature of the threat and take into account the risk of the Iraqi insurgency and the uncertainty surrounding Iraq's future. The key areas covered in this book include the internal terrorist threat to Saudi Arabia and the Gulf states; the impact of Iran's nuclear program and the risk it poses to energy and internal security in the Gulf area; and border disputes within the region that could develop into conflict. In addition, the book studies the impact of the Iraq War on regional security and the fear of the insurgency spilling over into neighboring states. Cordesman and Al-Rodhan demonstrate a shift toward using internal security services to deal with the threat of extremism and asymmetric warfare. They also suggest that high energy prices and export revenues provide the Gulf countries the opportunity to upgrade their military forces and deal with their undercapitalization as a result of low oil prices in the 1990s. Moreover, they insist that the future of Iraq, the strategic and nuclear posture of Iran, and the terrorist threat will remain major risks and uncertainties in the short to medium run.

LiDAR Technologies and Systems Paul F. McManamon, 2019 LiDAR technology and Systems is a tutorial book, covering LiDAR Technology. The introduction sets lidar in context, as one of many sensor technologies utilizing electro-magnetic radiation. LiDAR is in the optical and infrared wavelengths, and it is an active sensor, which collects reflected EM radiation. It is similar to more familiar passive EO/IR sensors in wavelength, and similar to radar in that it uses reflected radiation emitted by the sensor. The second chapter goes the > 50 years of lidar history. Chapter 3 covers the link budget - how much signal a LiDAR must emit in order to get a certain number of reflected photons back. Chapter 4 discusses the rich phenomenology of LiDAR. One of the strengths of LiDAR

is its' diverse phenomenology's. As a result, there are many flavors of LiDAR. The most common is 3D imaging, but there are many other types of lidars, with different measurement objectives. The next 4 chapters discuss components of a LiDAR. Chapter 5 discusses laser sources, chapter 6 LiDAR receivers, chapter 7 beam steering approaches, and chapter 8 LiDAR processing. The last 3 chapters are testing, metrics, and applications. Chapter 11, the applications chapter, picks 4 popular applications and discusses these LiDARs, and how to build them, for these applications. Chapter 11 as a result will repeats some information in earlier chapters, but in the context of a particular application--

**History of Telemedicine** Rashid Bashshur,Gary William Shannon,2009 The History of Telemedicine provides a comprehensive and in-depth analysis of the evolution of telemedicine from ancient Greece to the present time. It places the development of this field in the context of the never ending quest for providing equitable access to health care and re-casting the medical care landscape, while trying to assure quality and contain cost. The book describes the origin of modern telemedicine in experiments such as those by Willem Einthoven's 1905 long distance transfer of electrocardiograms through the pioneering era of teleradiology and telepsychiatry of the 1950s, its coming of age in the 1970s, its maturation in the 1990s, and finally the recent transformation and adoption by the mainstream. -- BOOK PUBLISHER WEBSITE.

The Asia-Pacific Trade Agreement Joong-Wan Cho,Rajan Sudesh Ratna,2016 International trade and investment have enabled many countries in the Asia-Pacific region to boost economic growth and have lifted millions out of poverty. As the Asia-Pacific region continues to thrive economically, trade and investment barriers are being dissolved and eliminated. As countries begin to depend on each other more, trade policy is gradually becoming a useful measure to achieve inclusive and sustainable development. Trade and investment are linked to the environment and social issues; hence, their impacts are also multi-dimensional. It has now been recognized that sustainable production and consumption are essential for sustainable development. Countries realize that they are not able to approach global and regional problems on their own and require cooperation, both at the level of government and business. As a result, the region has been active in concluding regional cooperation frameworks which routinely are centered on trade and investment. In the meantime, business has forged regional integration through the formation of regional value chains and production networks while governments have paved the way for the expansion of such production networks through the formation of regional trade agreements and economic partnerships. Thus, the Asia Pacific Trade Agreement (APTA), which is the oldest preferential trade agreement in the region with a large consumer base, can play an important role in filling this gap. Given a slow progress in the multilateral negotiations in the WTO, especially when the members have started questioning the utility of the negotiations after 15 years, and a lack of consensus on how to move forward, the regional trade agreements can play a vital role. Even if they pose a challenge to the multilateralism, selected liberalisation of trade and economy in present time can become a building block for future multilateral negotiations. One of the reasons for the surge in these preferential trade agreements is to make binding commitments on WTO-plus and WTO-beyond issues. While there are many agreements that exist in Asia and the Pacific, there is no such attempt to consolidate them in one umbrella framework. Understanding the benefits of the consolidation, one such initiative was started

by ESCAP a few years back. The RECI initiative for market integration could well be facilitated by APTA; however, it cannot deliver unless it transforms itself in a new generation agreement. Regional integration and cooperation are also important to meet the 2030 agenda for sustainable development. Instead of wasting resources in discussing a new institutional framework, it would be more effective to use the existing framework and for the Asia-Pacific economies, the APTA provides an existing institutional platform. The cases discussed in this book prepare a ground for the future, and it is expected that all the stakeholders, member States of ESCAP, private sector as well as researchers would benefit from this publication on APTA: South-South Regional Integration and Sustainable Development.

Globalizing Polar Science R. Launius, J. Fleming, D. DeVorkin, 2010-11-22 The International Polar Years and the International Geophysical Year represented a remarkable international collaborative scientific effort that has been largely neglected by historians. This groundbreaking collection seeks to redress that neglect and illuminate critical aspects of the last 150 years of international scientific endeavour.

**Strategies for Mars** Carol R. Stoker, Carter Emmart, 1996 Twenty-six essays written by workers in the space industry and interested lay people make a case for exploring Mars, arguing for the scientific objectives that could be achieved in the Martian frontier and even providing a cost and benefit analysis. The discussions suggest specific strategies in getting there, flight profiles, and rocket designs utilizing nuclear electric propulsion. However, the questions remains--what happens when we arrive? In response, the authors speculate on life support, biomedical issues, transportation, and living spaces based on Biosphere 2 results. Lacks an index. Space Capstone Publication Spacepower Us Government United States Space Force, 2020-08-11 This book, Space Capstone Publication Spacepower: Doctrine for Space Forces, is capstone doctrine for the United States Space Force and represents our Service's first articulation of an independent theory of spacepower. This publication answers why spacepower is vital for our Nation, how military spacepower is employed, who military space forces are, and what military space forces value. In short, this capstone document is the foundation of our professional body of knowledge as we forge an independent military Service committed to space operations. Like all doctrine, the SCP remains subject to the policies and strategies that govern its employment. Military spacepower has deterrent and coercive capacities - it provides independent options for National and Joint leadership but achieves its greatest potential when integrated with other forms of military power. As we grow spacepower theory and doctrine, we must do so in a way that fosters greater integration with the Air Force, Army, Navy, Marine Corps, and Coast Guard. It is only by achieving true integration and interdependence that we can hope to unlock spacepower's full potential.

Military Nanotechnology Jürgen Altmann, 2007-05-07 With revolutionary changes in nanotechnology (NT) now on the horizon, many countries have started major research and development (R&D) programmes, which are mainly civilian. Often overlooked are military R&D programmes - in particular those of the US government. This is the first systematic and comprehensive presentation of the potential military applications of NT. In ten to twenty years, these applications may include extremely small computers, robots, missiles, satellites, launchers and sensors. They may also provide lighter and stronger materials for vehicles and weapons, implants in soldiers' bodies, metal-free firearms, autonomous fighting systems, and smaller chemical and biological weapons. These potential uses raise strong concerns. This assessment is made from a viewpoint of international security, considering the new criteria of dangers for arms control and the international law of warfare, dangers for stability through potential new arms races and proliferation, and dangers for humans and society. Some military applications, such as computers, will be so close to civilian uses that limits are impractical. Others, such as sensors for biological-warfare agents, may contribute to stronger protection against terrorist attacks and better verification of compliance with arms-control treaties. For preventive limitation of these new

technologies, specific approaches are proposed that balance positive civilian uses and take into account verification of compliance, with a view to international peace and security, not national military strength. This book will be of great interest to scholars of military technology, non-lethal weapons, disarmament and security studies in general.
