Free Culture Lawrence Lessig, 2015-11-13 How big media uses technology and the law to lock down culture and control creativity. Free Culture is an entertaining and important look at the past and future of the cold war between the media industry and new technologies. - Marc Andreessen, cofounder of Netscape. Free Culture goes beyond illuminating the catastrophe to our culture of increasing regulation to show examples of how we can make a different future. These new-style heroes and examples are rooted in the traditions of the founding fathers in ways that seem obvious after reading this book. Recommended reading to those trying to unravel the shrill hype around 'intellectual property.' - Brewster Kahle, founder of the Internet Archive. The Digital Person Daniel J Solove, 2004 In a revealing study of how digital dossiers are created (usually without our knowledge), the author argues that we must rethink our understanding of what privacy is and what it means in the digital age, and then reform the laws that define and regulate it. Reprint.

The Mushroom at the End of the World Anna Lowenhaupt Tsing, 2017-09-19 What a rare mushroom can teach us about sustaining life on a fragile planet Matsutake is the most valuable mushroom in the world—and a weed that grows in human-disturbed forests across the northern hemisphere. Through its ability to nurture trees, matsutake helps forests to grow in daunting places. It is also an edible delicacy in Japan, where it sometimes commands astronomical prices. In all its contradictions, matsutake offers insights into areas far beyond just mushrooms and addresses a crucial question: what manages to live in the ruins we have made? A tale of diversity within our damaged landscapes, *The Mushroom at the End of the World* follows one of the strangest commodity chains of our times to explore the unexpected corners of capitalism. Here, we witness the varied and peculiar worlds of matsutake commerce: the worlds of Japanese gourmets, capitalist traders, Hmong jungle fighters, industrial forests, Yi Chinese goat herders, Finnish nature guides, and more. These companions also lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human destruction. By investigating one of the world's most sought-after fungi, *The Mushroom at the End of the World* presents an original examination into the relation between capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth.

Crossing the Rubicon Michael C. Ruppert, 2004-09-15 The acclaimed investigative reporter and author of *Confronting Collapse* examines the global forces that led to 9/11 in this provocative exposé. The attacks of September 11, 2001 were accomplished through an amazing orchestration of logistics and personnel. *Crossing the Rubicon* examines how such a conspiracy was possible through an interdisciplinary analysis of petroleum, geopolitics, narco-traffic, intelligence and militarism—without which 9/11 cannot be understood. In reality, 9/11 and the resulting War on Terror are parts of a massive authoritarian response to an emerging economic crisis of unprecedented scale. Peak Oil—the beginning of the end for our industrial civilization—is driving the elites of American power to implement unthinkable draconian measures of repression, warfare and population control. *Crossing the Rubicon* is more than a story of corruption and greed. It is a map of the perilous terrain through which we are all now making our way.

Mergers, Acquisitions, and Corporate Restructurings Patrick A. Gaughan, 2017-11-27 The essential M&A primer, updated with the latest research and statistics *Mergers, Acquisitions, and Corporate Restructurings* provides a comprehensive look at the field's growth and development, and places M&As in realistic context amidst changing trends, legislation, and global perspectives. This new seventh edition has been revised to improve clarity and approachability, and features the latest research and data to provide the most accurate assessment of the current M&A landscape. Ancillary materials include PowerPoint slides, a sample syllabus, and a test bank to facilitate training and streamline comprehension. As the global economy slows, merger and acquisition activity is expected to increase. This book provides an M&A primer for business executives and financial managers seeking a deeper understanding of how corporate restructuring can work for their companies. Understand the many forms of M&As, and the laws that govern them Learn the offensive and defensive techniques used during hostile acquisitions Delve into the strategies and motives that inspire M&As Access the latest data, research, and case studies on private equity, ethics, corporate governance, and more From large megadeals to various forms of downsizing, a full range of restructuring practices are currently being used to revitalize and supercharge companies around the world. *Mergers, Acquisitions, and Corporate Restructurings* is an essential resource for executives needing to quickly get up to date to plan their own company's next moves.

Ethics for the Information Age Michael Jay Quinn, 2006 Widely praised for its balanced treatment of computer ethics, *Ethics for the Information Age* offers a modern presentation of the moral controversies surrounding information technology. Topics such as privacy and intellectual property are explored through multiple ethical theories, encouraging readers to think critically about these issues and to make their own ethical decisions.

Touching Photographs Margaret Olin, 2012-05-21 Photography does more than simply represent the world. It acts in the world, connecting people to form relationships and shaping relationships to create communities. In this beautiful book, Margaret Olin explores photography's ability to "touch" us through a series of essays that shed new light on photography's role in the world. Olin investigates the publication of photographs in mass media and literature, the hanging of exhibitions, the posting of photocopied photographs of lost loved ones in public spaces, and the intense photographic activity of tourists at their destinations. She moves from intimate relationships between viewers and photographs to interactions around larger communities, analyzing how photography affects the way people handle cataclysmic events like 9/11. Along the way, she shows us James VanDerZee's Harlem funeral portraits, dusts off Roland Barthes's family album, takes us into Walker Evans and James Agee's photo-text *Let Us Now Praise Famous Men*, and logs onto online photo albums. With over one hundred illustrations, *Touching Photographs* is an insightful contribution to the theory of photography, visual studies, and art history.

The Enduring Challenge of Concentrated Poverty in America David Erickson, 2008 This report--a joint effort of the Federal Reserve's Community Affairs function and the Brookings Institution's Metropolitan Policy Program--examines the issue of concentrated poverty and profiles 16 high-poverty communities from across the country, including immigrant gateway, Native American, urban, and rural communities. Through these case studies, the report contributes to our understanding of the dynamics of poor people living in poor communities, and the policies that will be needed to bring both into the economic mainstream. It is not the intention of this publication to explain poverty causation. Instead, the goal is to add texture to our understanding of where and how concentrated poverty exists, by studying new areas and by interviewing local stakeholders, including residents, community leaders, and government representatives, to understand how concentrated poverty affects both individuals and communities. The report begins with *Concentrated Poverty in America: An Overview* (Alan Berube) and *Introduction to the Case Studies* (Carolina Reid). It then presents the following 16 case studies: (1) Fresno, California: the West Fresno neighborhood (Naomi Cytron); (2) Cleveland, Ohio: the Central neighborhood (Lisa Nelson); (3) Miami, Florida: the

Little Haiti neighborhood (Ana Cruz-Taura and Jessica LeVeen Farr); (4) Martin County, Kentucky (Jeff Gatica); (5) Blackfeet Reservation, Montana (Sandy Gerber, Michael Grover, and Sue Woodrow); (6) Greenville, North Carolina: the West Greenville neighborhood (Carl Neel); (7) Atlantic City, New Jersey: the Bungalow Park/Marina District area (Harriet Newburger, John Wackes, Keith Rolland, and Anita Sands); (8) Austin, Texas: the East Austin neighborhood (Elizabeth Sobel); (9) McKinley County, New Mexico: Crownpoint (Steven Shepelwich and Roger Zalneraitis); (10) McDowell County, West Virginia (Courtney Anderson Mailey); (11) Albany, Georgia: the East Albany neighborhood (Jessica LeVeen Farr and Sibyl Slade); (12) El Paso, Texas: the Chamizal neighborhood (Roy Lopez); (13) Springfield, Massachusetts: Old Hill, Six Corners, and the South End neighborhoods (DeAnna Green); (14) Rochester, New York: the Northern Crescent neighborhoods (Alexandra Forter Sirota and Yazmin Osaki); (15) Holmes County, Mississippi (Ellen Eubank); and (16) Milwaukee, Wisconsin: the Northwest neighborhood (Jeremiah Boyle). Following these case studies is *Learning from Concentrated Poverty in America: A Synthesis of Themes from the Case Studies* (Alan Berube, David Erickson, and Carolina Reid). Appended to this report are: (A) References for Comparison Statistics Tables; (B) Literature Review: Federal Reserve System Poverty-Related Research; (C) References for Overview in Alphabetical Order (by First Author); and (D) Photo Credits. (Individual case studies contain tables, figures, and footnotes.).

Climate Intervention National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Board on Atmospheric Sciences and Climate, Committee on Geoengineering Climate: Technical Evaluation and Discussion of Impacts, 2015-06-17 The signals are everywhere that our planet is experiencing significant climate change. It is clear that we need to reduce the emissions of carbon dioxide and other greenhouse gases from our atmosphere if we want to avoid greatly increased risk of damage from climate change. Aggressively pursuing a program of emissions abatement or mitigation will show results over a timescale of many decades. How do we actively remove carbon dioxide from the atmosphere to make a bigger difference more quickly? As one of a two-book report, this volume of *Climate Intervention* discusses CDR, the carbon dioxide removal of greenhouse gas emissions from the atmosphere and sequestration of it in perpetuity. *Climate Intervention: Carbon Dioxide Removal and Reliable Sequestration* introduces possible CDR approaches and then discusses them in depth. Land management practices, such as low-till agriculture, reforestation and afforestation, ocean iron fertilization, and land-and-ocean-based accelerated weathering, could amplify the rates of processes that are already occurring as part of the natural carbon cycle. Other CDR approaches, such as bioenergy with carbon capture and sequestration, direct air capture and sequestration, and traditional carbon capture and sequestration, seek to capture CO₂ from the atmosphere and dispose of it by pumping it underground at high pressure. This book looks at the pros and cons of these options and estimates possible rates of removal and total amounts that might be removed via these methods. With whatever portfolio of technologies the transition is achieved, eliminating the carbon dioxide emissions from the global energy and transportation systems will pose an enormous technical, economic, and social challenge that will likely take decades of concerted effort to achieve. *Climate Intervention: Carbon Dioxide Removal and Reliable Sequestration* will help to better understand the potential cost and performance of CDR strategies to inform debate and decision making as we work to stabilize and reduce atmospheric concentrations of carbon dioxide.

Who Watches the Watchmen? Gary Ross, 2016-01-23 *Who Watches the Watchmen?* could hardly be more timely as we debate the recent leaking of the largest trove of documents in American history. The WikiLeaks case drives home the need for what this book lays out: an approach to protecting classified information that goes beyond law enforcement. Gary Ross' application of Rational Choice Theory codifies, organizes, and extends what many of us have been trying to do instinctively when dealing with unauthorized disclosures. *Watchmen* attempts to answer two significant, timely questions:

What is the extent of the threat to national security posed by the media's disclosure of classified information? What are a journalist's motivations and justifications for publishing this information? The author concludes that the dilemma between withholding information in the interest of national security and the constitutional guarantee of a free press cannot be solved, but can be better understood and more intelligently managed.

The Future of Ideas Lawrence Lessig,2002-10-22 The Internet revolution has come. Some say it has gone. In *The Future of Ideas*, Lawrence Lessig explains how the revolution has produced a counterrevolution of potentially devastating power and effect. Creativity once flourished because the Net protected a commons on which widest range of innovators could experiment. But now, manipulating the law for their own purposes, corporations have established themselves as virtual gatekeepers of the Net while Congress, in the pockets of media magnates, has rewritten copyright and patent laws to stifle creativity and progress. Lessig weaves the history of technology and its relevant laws to make a lucid and accessible case to protect the sanctity of intellectual freedom. He shows how the door to a future of ideas is being shut just as technology is creating extraordinary possibilities that have implications for all of us. Vital, eloquent, judicious and forthright, *The Future of Ideas* is a call to arms that we can ill afford to ignore.

Stand Out of Our Light James Williams,2018-05-31 Argues that human freedom is threatened by systems of intelligent persuasion developed by tech giants who compete for our time and attention. This title is also available as Open Access.

Pragmatic Philanthropy Ruth A. Shapiro,Manisha Mirchandani,Heesu Jang,2018-01-10 This book is open access under a CC BY 4.0 license. This cutting edge text considers how Asian philanthropists and charitable organizations break with Western philanthropic traditions and examines the key traits and trends that make social investment in Asia unique. Based on 30 case studies of excellent social delivery organizations (SDOs) and social enterprises as well as interviews with ultra-high net-worth individuals throughout Asia, this book examines which characteristics and strategies lead to successful philanthropy and social delivery organizations. Providing evidence based findings on philanthropy, social investment and social delivery organizations in Asia, this book provides invaluable resources for those wishing to deepen their understanding of the sector and what this means for political and economic development in the region.

The Search for the First Americans Robert V. Davis,2023-03-07 Who were the First Americans? Where did they come from? When did they get here? Are they the ancestors of modern Native Americans? These questions might seem straightforward, but scientists in competing fields have failed to

convince one another with their theories and evidence, much less Native American peoples. The practice of science in its search for the First Americans is a flawed endeavor, Robert V. Davis tells us. His book is an effort to explain why. Most American history textbooks today teach that the First Americans migrated to North America on foot from East Asia over a land bridge during the last ice age, 12,000 to 13,000 years ago. In fact, that theory hardly represents the scientific consensus, and it has never won many Native adherents. In many ways, attempts to identify the first Americans embody the conflicts in American society between accepting the practical usefulness of science and honoring cultural values. Davis explores how the contested definition of First Americans reflects the unsettled status of Native traditional knowledge, scientific theories, research methodologies, and public policy as they vie with one another for legitimacy in modern America. In this light he considers the traditional beliefs of Native Americans about their origins; the struggle for primacy--or even recognition as science--between the disciplines of anthropology and archaeology; and the mediating, interacting, and sometimes opposing influences of external authorities such as government agencies, universities, museums, and the press. Fossil remains from Mesa Verde, Clovis, and other sites testify to the presence of First Americans. What remains unsettled, as *The Search for the First Americans* makes clear, is not only who these people were, where they came from, and when, but also the very nature and practice of the science searching for answers.

The Public Domain James Boyle,Erika Garcia,2017-11-25 In this insightful book you will discover the range wars of the new information age, which is today's battles dealing with intellectual property. Intellectual property rights marks the ground rules for information in today's society, including today's policies that are unbalanced and unsupported by any evidence. The public domain is vital to innovation as well as culture in the realm of material that is protected by property rights.

In Defence of Animals Peter Singer,1985-01-01 In Singer's book, the idea of the animal rights movement is set in the context of scientific knowledge, philosophy, and ethics. This highly readable account gives an invaluable introduction to modern thought on animal rights. (Animals/Pets)

Consortium, University of Washington. Climate Impacts Group, 2013 Climate Change in the Northwest: Implications for Our Landscapes, Waters, and Communities is aimed at assessing the state of knowledge about key climate impacts and consequences to various sectors and communities in the northwest United States. It draws on a wealth of peer-reviewed literature, earlier state-level assessment reports conducted for Washington (2009) and Oregon (2010), as well as a risk-framing workshop. As an assessment, it aims to be representative (though not exhaustive) of the key climate change issues as reflected in the growing body of Northwest climate change science, impacts, and adaptation literature now available. This report will serve as an updated resource for scientists, stakeholders, decision makers, students, and community members interested in understanding and preparing for climate change impacts on Oregon, Washington, and Idaho. This more detailed, foundational report is intended to support the key findings presented in the Northwest chapter of the Third National Climate Assessment.

Climate Time Series Analysis Manfred Mudelsee, 2010-08-26 Climate is a paradigm of a complex system. Analysing climate data is an exciting challenge, which is increased by non-normal distributional shape, serial dependence, uneven spacing and timescale uncertainties. This book presents bootstrap resampling as a computing-intensive method able to meet the challenge. It shows the bootstrap to perform reliably in the most important statistical estimation techniques: regression, spectral analysis, extreme values and correlation. This book is written for climatologists and applied statisticians. It explains step by step the bootstrap algorithms (including novel adaptations) and methods for confidence interval construction. It tests the accuracy of the algorithms by means of Monte Carlo experiments. It analyses a large array of climate time series, giving a detailed account on the data and the associated climatological questions. This makes the book self-contained for graduate students and researchers.
