Game Feel Steve Swink,2008-10-13 Game Feel exposes feel as a hidden language in game design that no one has fully articulated yet. The language could be compared to the building blocks of music (time signatures, chord progressions, verse) - no matter the instruments, style or time period - these building blocks come into play. Feel and sensation are similar building blocks when *Getting Ready for the 4th Grade Assessment Tests* Erika Warecki,2002 Getting Ready for the 4th Grade Assessment Test: Help Improve Your Child's Math and English Skills - Many parents are expressing a demand for books that will help their children succeed and excel on the fourth grade assessment tests in math and English -especially in areas where children have limited access to computers. Breakcore Andrew Whelan,2009-05-27 Peer-to-peer music exchange, sampling, and digital distribution have garnered much attention in recent years, notably in debates about authorship, intellectual property, media control, and 'Web 2'. However, empirical scholarship on how these technologies are used creatively by musicians and fans is still sparse. In this interdisciplinary ethnography of 'bedroom producer' culture, Andrew Whelan examines interaction and exchange within a specific online milieu: peer-to-peer chatrooms dedicated to electronic music, focusing on a genre known as 'breakcore'. The author draws on semantic anthropology, ethnomethodology, sociolinguistics, and critical musicology to explore the activity afforded by this controversial and criminalised environment. Through in-depth analysis of often ritually vituperative text-based interaction, discussions of music, and the samples used in that music, Whelan describes the cultural politics and aesthetics of bedroom producer identity, highlighting the roles gender and ethnicity play in the constitution of subcultural authenticity. Empirically driven throughout, this book also engages with a spectrum of social theory; in doing so, it highlights the intersections between gender, interaction, technology and music. This book will prove valuable for students and scholars with interests in gender and language use, computer-mediated communication, online subcultures and virtual community, and the evolution, production and distribution of electronic music.

Entertainment Computing - ICEC 2004 Matthias Rauterberg,2004-08-23 The advancement of information and communication technologies (ICT) has enabled broad use of ICT and facilitated the use of ICT in the private and personal domain. ICT-related industries are directing their business targets to home applications. Among these applications, entertainment will differentiate ICT applications in the private and personal market from the others. Comprehensive research and development on ICT - applications for entertainment will be different for the promotion of ICT use in the home and other places for leisure. So far engineering research and development on entertainment has never been really established in the academic communities. On the other hand entertainment-related industries such as the video and computer game industries have been growing rapidly in the last 10 years, and today the entertainment computing business outperforms the turnover of the movie industry. Entertainment robots are drawing the attention of young people. The event called RoboCup has been increasing the number of participants year by year. Entertainment technologies cover a broad range of products and services: movies, music, TV (including upcoming interactive TV), VCR, VoD (including music on demand), computer games, game consoles, video arcades, gaming machines, the Internet (e. g. , chat rooms, board and card games, MUD), intelligent toys, edutainment, simulations, sport, theme parks, virtual reality, and upcoming service robots. The field of entertainment computing focuses on users' growing use of entertainment technologies at work, in school and at home, and the impact of this technology on their behavior. Nearly every working and living place has computers, and over two-thirds of children in industrialized countries have computers in their homes as well.

Star Wars and the History of Transmedia Storytelling Sean Guynes, Dan Hassler-Forest, 2018 Star Wars has reached more than three generations of casual and hardcore fans alike, and as a result many of the producers of franchised Star Wars texts (films, television, comics, novels, games, and more) over the past four decades have been fans-turned-creators. Yet despite its dominant cultural and industrial positions, Star Wars has rarely been the topic of sustained critical work. Star Wars and the History of Transmedia Storytelling offers a corrective to this oversight by curating essays from a wide range of interdisciplinary scholars in order to bring Star Wars and its transmedia narratives more fully into the fold of media and cultural studies. The collection places Star Wars at the center of those studies' projects by examining video games, novels and novelizations, comics, advertising practices, television shows, franchising models, aesthetic and economic decisions, fandom and cultural responses, and other aspects of Star Wars and its world-building in their multiple contexts of production, distribution, and reception. In emphasizing that Star Wars is both a media franchise and a transmedia storyworld, Star Wars and the History of Transmedia Storytelling demonstrates the ways in which transmedia storytelling and the industrial logic of media franchising have developed in concert over the past four decades, as multinational corporations have become the central means for subsidizing, profiting from, and selling modes of immersive storyworlds to global audiences. By taking this dual approach, the book focuses on the interconnected nature of corporate production, fan consumption, and transmedia world-building. As such, this collection grapples with the historical, cultural, aesthetic, and political-economic implications of the relationship between media franchising and transmedia storytelling as they are seen at work in the world's most profitable transmedia franchise.

Ch@nge, 2013 The Internet has so entirely transformed virtually all aspects of everyday life that it seems almost impossible to assess its impact. Here, 19 esteemed scholars from around the world tackle the topic from different angles. Manuel Castells, David Gelernter, Juan Ignacio Vázquez, Evgeni Morozov, Mikko Hyppönen, Yochai Benkler, Federico Casalegno, David Crystal, Lucien Engelen, Patrik Wikström, Peter Hirshberg, Paul DiMaggio and Edward Castronova address such matters as the Internet of things; the sociology of the Internet; cybercrime and Internet security; the future of work; the Internet and urban-rural sustainability; the Worldstream and the Cybersphere; gaming and society; the Internet's influence on languages and new economic systems; the massive changes wrought by the net in the music industry; and other aspects of its many cultural, social and political ramifications.

Using Medicine in Science Fiction H. G. Stratmann, 2015-09-14 This book offers a clearly written, entertaining and comprehensive source of medical information for both writers and readers of science fiction. Science fiction in print, in movies and on television all too often presents dubious or simply incorrect depictions of human biology and medical issues. This book explores the real science behind such topics as how our bodies adapt to being in space, the real-life feasibility of common plot elements such as suspended animation and medical nanotechnology, and future prospects for improving health, prolonging our lives, and enhancing our bodies through technology. Each chapter focuses on a single important science fiction-related subject, combining concise factual information with examples drawn from science fiction in all media. Chapters conclude with a "Bottom Line" section summarizing the most important points discussed in the chapter and giving science fiction writers practical advice on how to incorporate them into their own creations, including a list of references for further reading. The book will appeal to all readers interested in learning about the latest ideas on a variety of science fiction-related medical topics, and offers an invaluable reference source for writers seeking to increase the realism and readability of their works. Henry G. Stratmann, MD, FACC, FACP is a cardiologist with board certifications in internal medicine, cardiology, and nuclear cardiology. Before entering private practice he became Professor of Medicine at St. Louis University School of Medicine and performed clinical medical research. Henry received a BA in chemistry from St. Louis University and his MD at Southern Illinois University School of Medicine. He is currently enrolled at Missouri State University to obtain a BS in physics with a minor in astronomy. His professional publications include being an author or coauthor of many research articles for medical journals, primarily in the field of nuclear cardiology. Henry is also a regular contributor of both stories and science fact articles to Analog Science Fiction and Fact.

Anarchism, Marxism, and the Future of the Left Murray Bookchin, 1999 Murray Bookchin has been a dynamic revolutionary propagandist since the 1930s when, as a teenager, he orated before socialist crowds in New York City and engaged in support work for those fighting Franco in the Spanish Civil War. Now, for the first time in book form, this volume presents a series of exciting and engaged interviews with, and essays from, the founder of social ecology. This expansive collection ranges over, amongst others, Bookchin's account of his teenage years as a young Communist during the Great Depression, his experiences of the 1960s and reflections on that decade's lessons, his vision of a libertarian communist society, libertarian politics, the future of anarchism, and the unity of theory and practice. He goes on to assess the crisis of radicalism today and defends the need for a revolutionary Left. Finally, he states what is to be valued in both anarchism and Marxism in building such a Left and offers guidelines for forming a new revolutionary social movement.

How to Do Things with Videogames Ian Bogost,2011-08-05 In recent years, computer games have moved from the margins of popular culture to its center. Reviews of new games and profiles of game designers now regularly appear in the New York Times and the New Yorker, and sales figures for games are reported alongside those of books, music, and movies. They are increasingly used for purposes other than entertainment, yet debates about videogames still fork along one of two paths: accusations of debasement through violence and isolation or defensive paeans to their potential as serious cultural works. In How to Do Things with Videogames, Ian Bogost contends that such generalizations obscure the limitless possibilities offered by the medium’s ability to create complex simulated realities. Bogost, a leading scholar of videogames and an award-winning game designer, explores the many ways computer games are used today: documenting important historical and cultural events; educating both children and adults; promoting commercial products; and serving as platforms for art, pornography, exercise, relaxation, pranks, and politics. Examining these applications in a series of short, inviting, and provocative essays, he argues that together they make the medium broader, richer, and more relevant to a wider audience. Bogost concludes that as videogames become ever more enmeshed with contemporary life, the idea of gamers as social identities will become obsolete, giving rise to gaming by the masses. But until games are understood to have valid applications across the cultural spectrum, their true potential will remain unrealized. How to Do Things with Videogames offers a fresh starting point to more fully consider games’ progress today and promise for the future.
