Probing the Sky Curtis Peebles,Richard Hallion,2014-12-10 With the development of supersonic aircraft, the X-plane era ushered in a new and challenging phase of flight. Researchers found that much of the knowledge accumulated from the previous, subsonic flight era did not apply to the emerging supersonic aircraft. These turbojet-powered planes also outpaced the usefulness of the wind tunnel, previously an indispensable tool of aeronautic research.This book explores the development of the X-series research aircraft, the planes that helped bridge the gap between subsonic flight and hypersonic flight.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Interactive Aerospace Engineering and Design Dava J. Newman,2002 This text contains an integrated bound-in CD-ROM, and has a strong emphasis on design. Its active visual approach and inclusion of space-orientated engineering make it an interesting examination of the aerospace engineering field.

In-Flight Simulators and Fly-by-Wire/Light Demonstrators Peter G. Hamel,2017-03-15 This book offers the first complete account of more than sixty years of international research on In-Flight Simulation and related development of electronic and electro-optic flight control system technologies (“Fly-by-Wire” and “Fly-by-Light”). They have provided a versatile and experimental procedure that is of particular importance for verification, optimization, and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems. Extensive coverage is given in the book to both fundamental information related to flight testing and state-of-the-art advances in the design and implementation of electronic and electro-optic flight control systems, which have made In-Flight Simulation possible. Written by experts, the respective chapters clearly show the interdependence between various aeronautical disciplines and in-flight simulation methods. Taken together, they form a truly multidisciplinary book that addresses the needs of not just flight test engineers, but also other aeronautical scientists, engineers and project managers and historians as well. Students with a general interest in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful. The omission of mathematical equations and in-depth theoretical discussions in favor of fresh discussions on innovative experiments, together with the inclusion of anecdotes and fascinating photos, make this book not only an enjoyable read, but also an important incentive to future research. The book, translated from the German by Ravindra Jategaonkar, is an extended and revised English edition of the book *Fliegende Simulatoren und Technologieträger* , edited by Peter Hamel and published by Appelhans in 2014.

"Over the Top" Arthur Guy Empey,1917 Excerpt: ...of the trench. One dead German was lying on his back, with a rifle sticking straight up in the air, the bayonet of which was buried to the hilt in his chest. Across his feet lay a dead English soldier with a bullet hole in his forehead. This Tommy must have been killed just as he ran his bayonet through the German. Rifles and equipment were scattered about, and occasionally a steel helmet could be seen sticking out of the mud. At one point, just in the entrance to a communication trench, was a stretcher. On this stretcher a German was lying with a white bandage around his knee, near to him lay one of the stretcher-bearers, the red cross on his arm covered with mud and his helmet filled with blood and brains. Close by, sitting up against the wall of the trench, with head resting on his chest, was the other stretcher-bearer. He seemed to be alive, the posture was so natural and easy, but when I got closer, I could see a large, jagged hole in, his temple. The three must have been killed by the same shell-burst. The dugouts were all smashed in and knocked about, big square-cut timbers splintered into bits, walls caved in, and entrances choked. Tommy, after taking a trench, learns to his sorrow, that the hardest part of the work is to hold it. In our case this proved to be so. The German artillery and machine guns had us taped (ranged) for fair; it was worth your life to expose yourself an instant. Don't think for a minute that the Germans were the only sufferers, we were clicking casualties so fast that you needed an adding machine to keep track of them. Did you ever see one of the steam shovels at work on the Panama Canal, well, it would look like a hen scratching alongside of a Tommy digging in while under fire, you couldn't see daylight through the clouds of dirt from his shovel. After losing three out of six men of our crew, we managed to set up our machine gun. One of the legs of the tripod was resting on the chest of a half-buried body. When...

Emblems of Exploration Joseph R. Chambers,Mark A. Chambers,2015 This publication's first objective is to convey detailed information regarding the designers and design process for the emblems of NASA and its predecessor, the National Advisory Committee for Aeronautics (NACA). The second objective is to briefly illustrate the applications of these respected and admired insignias and seals within the cultures of each agency. For this task, photographs and descriptions are used to exemplify applications to buildings, equipment, aircraft and spacecraft, correspondence and documents, and personal memorabilia such as pins, awards, and retirement plaques. The material presented herein is organized chronologically and covers the subject from the first days of the NACA in 1915 to the current-day situation in NASA.

100 Years of Radar Gaspare Galati,2015-09-15 This book offers fascinating insights into the key technical and scientific developments in the history of radar, from the first patent, taken out by Hülsmeyer in 1904, through to the present day. Landmark events are highlighted and fascinating insights provided into the exceptional people who made possible the progress in the field, including the scientists and technologists who worked independently and under strict secrecy in various countries across the world in the 1930s and the big businessmen who played an important role after World War II. The book encourages multiple levels of reading. The author is a leading radar researcher who is ideally placed to offer a technical/scientific perspective as well as a historical one. He has taken care to structure and write the book in such a way as to appeal to both non-specialists and experts. The book is not sponsored by any company or body, either formally or informally, and is therefore entirely unbiased. The text is enriched by approximately three hundred images, most of which are original and have been accessed by detailed searches in the archives.

A History of Optical Telescopes in Astronomy Wilson Wall,2018-10-01 This book is uniquely about the relationship between the optical telescope and astronomy as they developed together. It covers the time between the telescope's pivotal invention in the 1600's up to the modern era of space-based telescopes. Over the intervening centuries, there were huge improvements in the optical resolution of telescopes, along with

changes in their positioning and nature of application that forever altered the course of astronomy. For a long time, the field was an exclusive club for self-motivated stargazers who could afford to build their own telescopes. Many of these leisure-time scholars left their mark by virtue of their meticulous observations and record keeping. Although they would now be considered amateurs, these figures and their contributions were pivotal and are covered in this book alongside professionals, for the first time giving a complete picture of the history of telescopic science.

Combat Aviation Kishore Kumar Khera,2020-10-28 Combat aircraft, a powerful component of military strength, define the battle space today. In the last five decades, world combat aircraft inventory, after peaking in 1988, gradually declined owing to changes in the geopolitical landscape, altering character of war, evolving technology and emerging alternatives. Today, there are 106 countries in the world that own and operate around 80 types of approximately 18,000 combat aircraft. But, there are only 19 countries that have more than 200 combat aircraft in their inventories. In this book, the available data of the world's combat aircraft inventory is analysed for the trends and probable reasons for changes in the holdings, before predicting the future trajectory of manned combat aircraft. Additionally, the role of combat aircraft and their interplay with various tenets of Indian air power capability and the likely future is discussed. Combat aircraft, a powerful component of military strength, need a large resource investment in procurement and operations. The world had around 18,000 combat aircraft in 1968 and fifty years later the combat aircraft inventory is again almost at that level today. In five decades, the combat aircraft inventory peaked to near 38,000 in 1988. Changes in the geopolitical landscape, altering character of war, evolving technology and emerging alternatives led to its gradual decline thereafter. Today, there are 106 countries in the world that own and operate around 80 types of approximately 18,000 combat aircraft. But, there are only 19 countries that have more than 200 combat aircraft in their inventories. In this book, the available data of the combat aircraft inventory of the world is analysed for the trends and probable reasons for changes in the holdings before predicting the future trajectory of manned combat aircraft. Additionally, the role of combat aircraft and its interplay with various tenets of Indian air power capability and likely future is discussed.

American Flying Boats and Amphibious Aircraft E.R. Johnson,2016-03-29 This work is a comprehensive, heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States. It is divided into three chronological sections: the early era (1912-1928), the golden era (1928-1945), and the post-war era (1945-present), with historical overviews of each period. Within each section, individual aircraft types are listed in alphabetical order by manufacturer or builder, with historical background, technical specifications, drawings, and one or more photographs. Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage.

Introduction to Air Transport Economics Bijan Vasigh,Ken Fleming,2016-05-06 Introduction to Air Transport Economics: From Theory to Applications uniquely merges the institutional and technical aspects of the aviation industry with their theoretical economic underpinnings. Its integrative approach offers a fresh point of view that will find favor with many students of aviation. The book offers a self-contained theory and applications-oriented text for any individual intent on entering the aviation industry as a practicing professional in the management area. It will be of greatest relevance to undergraduate and graduate students interested in obtaining a more complete understanding of the economics of the aviation industry. It will also appeal to many professionals who seek an accessible and practical explanation of the underlying economic forces that shape the industry. The second edition has been extensively updated throughout. It features new coverage of macroeconomics for managers, expanded analysis of modern revenue management and pricing decisions, and also reflects the many significant developments that have occurred since the original's publication. Instructors will find this modernized edition easier to use in class, and suitable to a wider variety of undergraduate or graduate course structures, while industry practitioners and all readers will find it more intuitively organized and more user friendly.

Critique of Entrepreneurship Peter Armstrong,2005-05-11 The sponsorship of the entrepreneur as an agent of economic growth is now at the centre of a vast promotional industry, involving politicians, government departments and higher education. This book examines the origins of this phenomenon and subjects its mythologies, hero-figures and policies to an empirically based critical examination.

Spencer,2008-01-01 The content of this book is the letter, Top Secret interview transcripts and personal notes received from the late Matilda O'Donnell MacElroy, an Army Air Force nurse who stationed at the Roswell Army Air Field 509th Bomb Group.Her letter asserts that this material is based on a series of interviews she conducted with an extraterrestrial being as part of her official duty as a nurse in the U.S. Army Air Force. During July and August she interviewed a saucer pilot who crashed near Roswell, New Mexico on July 8th, 1947.
