The Mikoyan-Gurevich Mig-3 Vol. I Dariusz Paduch,2022-01-31 The MiG-3 fighter plane, like the history of the creation of the Mikoyan and Gurevich (Микоян и Гуревич) design bureau, is relatively well known to anyone interested in the history of Soviet aviation. Many books and articles have been published about this machine, but information about the circumstances of the birth of the project and the conditions of its creation are very brief and concise. MiG-1 and MiG-3 were the most numerous new generation fighters in Soviet aviation at the time of the German invasion of the USSR. They played a very important role in the first period of the war. Until now, it has been assumed in the literature that this applies mainly to the use of these aircraft during the battle of Moscow, as well as capital's and Leningrad's air defense, but MiGs also took on a large weight of air combat at the front in 1941.

The Mikoyan-Gurevich Mig-3 Vol. II Dariusz Paduch,2022-04-30 The I-200 fighter project was a compromise between design office's capabilities, realities of the Soviet aviation industry, with its available technologies, and military requirements. According to the brief description of the MiG-3 from 1941, it was, in terms of its purpose, an interceptor, but, interestingly, it could also be used as... an attack aircraft, or a light, fast dive bomber. Both the I-200 prototypes and the later MiG-1 and MiG-3 were single-seat, single-engine, mixed-design low-wing aircraft. Front part of the fuselage, together with the center wing, up to the rear wall of the pilot's cockpit, was made of metal. Only the tail part of the fuselage and wing consoles were wooden. Vertical stabilizer, which was an integral part of the fuselage, was made of wood, too, but horizontal stabilizer was all-metal. Rudders and ailerons had a metal construction and canvas cover. Undercarriage was made of chromansil steel. In front part of the fuselage there was a pilot's cabin with a seat, instrument panel and controls, front fuel tank, main offensive armament, water cooler and other components. Center wing was attached to the front part of the fuselage at seven points, the rear part at four points, while the engine mount was supported by two.

MiG-3 Aces of World War 2 Dmitriy Khazanov,2013-05-20 The MiG-1/3 family of fighters was built to satisfy a Soviet Air Force requirement for an advanced, fast, high-altitude fighter. Entering service in the spring of 1941, the problematic MiG-1 had its handling issues rectified with the hasty production of the MiG-3. Many of these were destroyed on the ground when the Germans launched Operation Barbarossa. Nevertheless, enough examples survived to allow pilots such as Stepan Suprun and Aleksandr Pokryshkin to claim a number of victories in the type. This book tells the complete story of the men who made ace in the first examples of the famous MiG fighter.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

The Spy Who Changed History Svetlana Lokhova,2019-10-01 On a sunny September day in 1931, Soviet spy Stanislav Shumovsky walked down the gangplank of the SS Europa and into New York, concealed in a group of 65 Soviet students. Joseph Stalin had sent him to acquire American secrets to help close the USSR's yawning technology gap, and the road to victory began in the classrooms and laboratories of MIT.Using information gleaned from this mission, the USSR first transformed itself into a military powerhouse able to defeat Nazi Germany. Then in 1947, American innovation exfiltrated by Shumovsky made it possible to build and unveil the most advanced strategic bomber in the world. Later , other MIT-trained Soviet spies would go on to acquire the secrets of the Manhattan Project.In this thrilling history, Svetlana Lokhova takes the reader on a journey through Stalin's most audacious intelligence operation, piecing together every aspect of Shumovsky's life and character using information derived from American and Russian archives.

Foxbats Over Dimona Isabella Ginor,Gideon Remez,2008-10-01 Isabella Ginor and Gideon Remez's groundbreaking history of the Six-Day War in 1967 radically changes our understanding of that conflict, casting it as a crucial arena of Cold War intrigue that has shaped the Middle East to this day. The authors, award-winning Israeli journalists and historians, have investigated newly available documents and testimonies from the former Soviet Union, cross-checked them against Israeli and Western sources, and arrived at fresh and startling conclusions. Contrary to previous interpretations, Ginor and Remez's book shows that the Six-Day War was the result of a joint Soviet-Arab gambit to provoke Israel into a preemptive attack. The authors reveal how the Soviets received a secret Israeli message indicating that Israel, despite its official ambiguity, was about to acquire nuclear weapons. Determined to destroy Israel's nuclear program before it could produce an atomic bomb, the Soviets then began preparing for war--well before Moscow accused Israel of offensive intent, the overt trigger of the crisis. Ginor and Remez's startling account details how the Soviet-Arab onslaught was to be unleashed once Israel had been drawn into action and was branded as the aggressor. The Soviets had submarine-based nuclear missiles poised for use against Israel in case it already possessed and tried to use an atomic device, and the USSR prepared and actually began a marine landing on Israel's shores backed by strategic bombers and fighter squadrons. They sent their most advanced, still-secret aircraft, the MiG-25 Foxbat, on provocative sorties over Israel's Dimona nuclear complex to prepare the planned attack on it, and to scare Israel into making the first strike. It was only the unpredicted devastation of Israel's response that narrowly thwarted the Soviet design.

Coalition Air Warfare in the Korean War, 1950-1953 Air Force Historical Foundation. Symposium,2005 In commemoration of the fiftieth anniversary of the Korean War, the official history offices of the U.S. Army, Navy, Marine Corps, and Air Force and their respective historical associations collaborated to sponsor as comprehensive a symposium as possible, including as participants some of the coalition partners who contributed forces and weapons to the war. The intent of this symposium, titled Coalition Air Warfare during the Korean War, 1950 -1953, was to focus not only on the contributions made by the armed forces of the United States, but also on those of America's allies. The diverse group of panelists and speakers included not only scholars with subject matter expertise, but also veteran soldiers, sailors, and airmen who had served in that conflict. It was hoped that the melding of these diverse perspectives would provide interesting, if sometimes conflicting, views about the Korean War. The symposium organizers designated an agenda of six specific panels for investigation, including Planning and Operations; Air Superiority, Air Support of Ground

Forces; Air Interdiction and Bombardment, Air Reconnaissance and Intelligence, and Logistical Support of Air Operations. Each session began with commentary by the panel chairman, which was followed by formal papers, and in some instances included a lively question and answer session. The papers and most of the proceedings found their way into print and are recorded here in an effort to permanently capture the activities, challenges, contributions, and heroics of the coalition air forces and the airmen who fought during the Korean conflict.

The Petlyakov Pe-2 Peter C. Smith, 2020-03-30 The definitive book on the development and deployment of the Soviet Union's supreme dive-bomber—with rare archival and private photos. During the Second World War, the Petlyakov Pe-2 Peshka was the Soviet Union's main dive- and light-bomber in operations across the Eastern Front. It became a mainstay of the Soviet counteroffensive that led to the fall of Berlin. They also led the way in the brief but annihilating Manchurian campaign against Japan in the closing days of the war in 1945. Conceived by a team of top aircraft designers whom Stalin had incarcerated on political charges, the Peshka had originally been designed as a high-altitude twin-engine fighter plane. But due to the outstanding success of the German Stukas in the Blitzkrieg, it was quickly transformed into the fastest dive-bomber in the skies. Only a handful had reached front lines by the start of Operation Barbarossa in June 1941. But by 1945, more than 11,000 of the type were built, including many variants. Many of these remained in service with the air forces of Yugoslavia and the Warsaw Pact countries into the 1950s. Using official sources, including the official Pe-2 handbook, as well as rare color and black-and-white photographs from both official and private collections, this is the definitive record of the Pe-2.

Electronic Warfare and Radar Systems Engineering Handbook, 1997-04-01 This handbook is designed to aid electronic warfare and radar systems engineers in making general estimations regarding capabilities of systems. It is not intended as a detailed designer's guide, due to space limitations. Portions of the handbook and future changes will be posted on an internet link.

Japanese Secret Projects Edwin M. Dyer, 2009 Surprisingly, secret Japanese planes of World War II remain an area that has been largely ignored due to scarcity of information. They do, however, have a large base of interest as unlike the majority of secret Luftwaffe programs that were resigned to the drawing board, the vast number of aircraft featured within this book actually flew or were in development. The book begins with an overview of the IJN and IJA through the early years to 1945, and their secret technical exchanges with the Luftwaffe throughout the war. It is divided into two sections dedicated to the two armed forces, with a total of 34 aircraft examined, each with its history, performance, and combat records laid out in an easy to read fashion. The book provides photographs, technical drawings, and stunning color renditions of the aircraft in combat. Notable emphasis is placed upon the supersonic kamikaze aircraft, the Amerika bomber, and the ways in which the Japanese improved on German technology, particularly the Me 262 and Komet. Secret Japanese armaments are also covered in detail, with information uncovered on guided missiles, rockets, and cannons. A gripping read for aviation and military enthusiasts around the world!

Introduction to UAV Systems Paul Fahlstrom, Thomas Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in themilitary world over the last decade and the success of thesemilitary applications is increasingly driving efforts to establishunmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensiveintroduction to all of the elements of a complete Unmanned AircraftSystem (UAS). It addresses the air vehicle, mission planning andcontrol, several types of mission payloads, data links and how theyinteract with mission performance, and launch and recoveryconcepts. This book provides enough information to encourage astudent to learn more; to provide a specialist with a basicappreciation of the technical issues that drive other parts of thesystem and interact with their specialty; or to help a programmanager understand system-level tradeoffs and know what questionsto ask. Key features: Comprehensive overview of all elements of a UAS and of how theyinteract. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned inUAV programs. Introduction to UAV Systems, 4th edition is written both for newcomersto the subject and for experienced members of the UAV community whodesire a comprehensive overview at the system level. As well as being a primary text for an introductory course onUAS or a supplementary text in a course that goes into more depthin one of the individual technologies involved in a UAS, this bookis a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Aircraft Propulsion and Gas Turbine Engines Ahmed F. El-Sayed, 2017-07-06 Aircraft Propulsion and Gas Turbine Engines, Second Edition builds upon the success of the book's first edition, with the addition of three major topic areas: Piston Engines with integrated propeller coverage; Pump Technologies; and Rocket Propulsion. The rocket propulsion section extends the text's coverage so that both Aerospace and Aeronautical topics can be studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts, the first two devoted to air breathing engines, and the third covering non-air breathing or rocket engines.
