Persi Diaconis and Ron Graham provide easy, step-by-step instructions for each trick, explaining how to set up the effect and offering tips on what to say and do while performing it. Each card trick introduces a new mathematical idea, and varying the tricks in turn takes readers to the very threshold of today's mathematical knowledge. For example, the Gilbreath principle--a fantastic effect where the cards remain in control despite being shuffled--is found to share an intimate connection with the Mandelbrot set. Other card tricks link to the mathematical secrets of combinatorics, graph theory, number theory, topology, the Riemann hypothesis, and even Fermat's last theorem. Diaconis and Graham are mathematicians as well as skilled performers with decades of professional experience between them. In this book they share a wealth of conjuring lore, including some closely guarded secrets of legendary magicians. Magical Mathematics covers the mathematics of juggling and shows how the I Ching connects to the history of probability and magic tricks both old and new. It tells the stories--and reveals the best tricks--of the eccentric and brilliant inventors of mathematical magic. Magical Mathematics exposes old gambling secrets through the mathematics of shuffling cards, explains the classic street-gambling scam of three-card monte, traces the history of mathematical magic back to the thirteenth century and the oldest mathematical trick--and much more!"

**The Stone Soup Experiment** Deborah Downing Wilson 2015-10-26 The Stone Soup Experiment is a remarkable story of cultural difference, of in-groups, out-groups, and how quickly and strongly the lines between them are drawn. It is also a story about simulation and reality, and how quickly the lines between them can be dismantled. In a compulsively readable account, Deborah Downing Wilson details a ten-week project in which forty university students were split into two different simulated cultures: the carefree Stoners, and the market-driven Traders. Through their eyes we are granted intimate access to the very foundations of human society: how group identities are formed and what happens when opposing ones come into contact. The experience of the Stoners and Traders is a profound testament to human sociality. Even in the form of simulation, even as a game, the participants found themselves quickly—and with real conviction—bound to the ideologies and practices of their in-group. The Stoners enjoyed their days lounging, chatting, and making crafts, while the Traders—through a complex market of playing cards—competed for the highest bankrolls. When they came into contact, misunderstanding, competition, and even manipulation prevailed, to the point that each group became so convinced of its own superiority that even after the simulation’s end the students could not reconcile. Throughout her riveting narrative, Downing Wilson interweaves fascinating discussions on the importance of play, emotions, and intergroup interaction in the formation and maintenance of group identities, as well as on the dynamic social processes at work when different cultural groups interact. A fascinating account of social experimentation, the book paints a vivid portrait of our deepest social tendencies and the powers they have over how we make friends and enemies alike.
