**Rocket and Spacecraft Propulsion** Martin J. L. Turner, 2006-08-29 The revised edition of this practical, hands-on book discusses the launch vehicles in use today throughout the world, and includes the latest details on advanced systems being developed, such as electric and nuclear propulsion. The author covers the fundamentals, from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors, to new and future developments. He provides a serious exposition of the principles and practice of rocket propulsion, from the point of view of the user who is not an engineering specialist.

*Beyond Earth* Asif A. Siddiqi, 2018 This is a completely updated and revised version of a monograph published in 2002 by the NASA History Office under the original title *Deep Space Chronicle: A Chronology of Deep Space and Planetary Probes, 1958-2000*. This new edition not only adds all events in robotic deep space exploration after 2000 and up to the end of 2016, but it also completely corrects and updates all accounts of missions from 1958 to 2000--Provided by publisher.

*China's Strategic Modernization Implications for the United States* Mark A. Stokes, Conventional wisdom portrays the People's Republic of China (PRC) People's Liberation Army (PLA) as a backward continental force that will not pose a military challenge to its neighbors or to the United States well into the 21st century. PLA writings that demonstrate interest in exploiting the revolution in military affairs (RMA) are dismissed by a large segment of the PLA- watching community as wistful fantasies. The author offers an alternative perspective by outlining emerging PLA operational concepts and a range of research and development projects that appear to have been heavily influenced by U.S. and Russian writings on the RMA. Fulfillment of the PLA's vision for the 21st century could have significant repercussions for U.S. interests in the Asia-Pacific region.

**A New Direction for China's Defense Industry** Evan S. Medeiros, Roger Cliff, Keith Crane, James C. Mulvenon, 2005-12-19 Since the early 1980s, a prominent and consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

The Chinese Space Program Joan Johnson-Freese, 1998 Analyzes the Chinese space program in the context of Chinese political, economic, and cultural parameters critical to realistic and pragmatic policy analysis. Projections are offered concerning where China might be going in the future, what policy actions the US might take to avoid a confrontational stance with China, and how to encourage Beijing to build a more stable regime. Includes a glossary. Annotation copyrighted by Book News, Inc., Portland, OR

**China's Nuclear Force Modernization** Naval War College Press, Lyle J. Goldstein, Andrew S. Erickson, 2012-08-09 The Naval War College has expanded its expertise in the Asia-Pacific Rim region in recent years largely in response to the growing significance of the region to U.S. national security. The College has actively hired prominent scholars and hosted a number of conferences, workshops, and guest speakers focusing on the problems and possibilities facing the Pacific Rim. South and Northeast Asia, after all, are home to some of the world's fastest-growing economies and close American allies, as well as several potential political and diplomatic flashpoints. Even more to the point, China is an ascending economic and military power both in the region and on the world stage. The U.S. Navy plays a leading role in maintaining stability in the region with its strong presence and ability to guard the freedom of navigation in vital sea lines of communication. The efforts of the Asia-Pacific Rim specialists at the Naval War College in some ways represent a case of "back to the future." One of the proudest episodes in the College's history came in the 1930s when Newport played a central role in developing the military plans necessary to cope with the ascendancy of another Asian economic and military power-Japan. Although we expect that wise diplomacy and national self-interest will prevent a recurrence of similar difficulties in the coming decades, there is no substitute for military preparedness and well-thought-out international and regional strategies for dealing with the important region. The Naval War College Press has done its part in providing its readers with many excellent articles on regional security in Asia in the Naval War College Review; an important book-Jonathan Pollack, editor, *Strategic Surprise? U.S.-China Relations in the Early Twenty-first Century* (released March 2004); and now Newport Paper 22. Professor Lyle Goldstein of the Strategic Research Department of the College's Center for Naval Warfare Studies has been at the forefront of recent research into China's future. In this project he has guided a handful of naval officers through the puzzle of China's ongoing nuclear modernization programs. With the able assistance of Andrew Erickson, these sailor-scholars have examined various aspects of nuclear modernization from ballistic missile defense to nuclear command and control. In general the chapter tells a cautionary tale; the progress of China's nuclear modernization documented here should give pause to those inclined to dismiss China's military modernization. Steadily and with relatively little attention the People's Republic continues to improve its technologies and weapons systems. As the authors emphasize, no "Rubicon" has been crossed, but potentials are already apparent that, if realized, the U.S. Navy as now constituted would find challenging indeed.

*Civil-Military Change in China Elites, Institutes, and Ideas after the 16th Party Congress* Larry Wortzel, 2004 In November 2002, the Chinese Communist Party held its 16th Congress and formally initiated a sweeping turnover of senior leaders in both the Party and the People's Liberation Army (PLA). The meeting heralded not merely a new set of personalities in positions of political and military power, but also the emergence of a new generation of leaders. Who are these individuals, and what does their rise mean for the future of China and its military? The group of China specialists who have written this book have applied their research talents, intelligence, and hands-on experience to clarify and explain the most important issues of the day in China. China obviously matters to the United States because of its size, its spectacular patterns of growth, its profound problems linked to rapid growth, and its military intentions. These specialists have avoided the diseases of bias, demagoguery, predispositions, and showmanship, which infect so many of the analyses of China. Rather, they have examined the facts and the trends to explain the divisions and cohesions in the Chinese leadership and their potential significance to the United States and the rest of the world. These annual conferences have a long continuity stretching back to the early 1990s. Hence, there is a common database for the books produced each year. The writers revisit major problems in China's development, particularly in the military sphere. They also examine how Chinese policies have evolved over the years, and how important the United States has been in influencing China's strategy. What, for instance, will the emerging leadership with its factious differences do about Taiwan and North Korea? The conference took place at the Carlisle Barracks in September 19- 21, 2003, and was sponsored by the American Enterprise Institute, the Heritage Foundation and the Army War College. The exchanges were frank, the atmosphere was filled with camaraderie and tension.

*Space Rescue* Shayler David, 2009-03-17 Looks forward to the completion of the ISS, possibility of return to the moon, manned flights to Mars, and the prospect of safety and rescue far beyond. Describes the role of Mission Control and recovery forces in ensuring the support from the ground to the crew in space. Provides a unique

range of historic archive of material on the Russian programme. Presents a review of the Columbia accident, its investigation and various proposed rescue scenarios. Details escape systems devised for rocket research aircraft, early manned spacecraft, abort and recovery options from Earth orbit, and from lunar distance. Demonstrates that crew safety has been a factor in planning and mounting on all manned spaceflights.

**China, Cambodia, and the Five Principles of Peaceful Coexistence** Sophie Richardson,2009-12-10 Why would China jeopardize its relationship with the United States, the former Soviet Union, Vietnam, and much of Southeast Asia to sustain the Khmer Rouge and provide hundreds of millions of dollars to postwar Cambodia? Why would China invest so much in small states, such as those at the China-Africa Forum, that offer such small political, economic, and strategic return? Some scholars assume pragmatic or material concerns drive China's foreign policy, while others believe the government was once and still is guided by Marxist ideology. Conducting rare interviews with the actual policy makers involved in these decisions, Sophie Richardson locates the true principles driving China's foreign policy since 1954's Geneva Conference. Though they may not be right in a moral sense, China's ideals are based on a clear view of the world and the interaction of the people within it—a philosophy that, even in an era of unprecedented state power, remains tied to the origins of the PRC as an impoverished, undeveloped state. The Five Principles of Peaceful Coexistence mutual respect for territorial integrity and sovereignty; nonaggression; noninterference; equality and mutual benefit; and peaceful coexistence live at the heart of Chinese foreign policy and set the parameters for international action. In this model of state-to-state relations, the practices of extensive diplomatic communication, mutual benefit, and restraint in domestic affairs become crucial to achieving national security and global stability.

*Moon Shot* Alan Shepard,Deke Slayton,Jay Barbree,2011-05-03 New York Times bestseller for fans of First Man: A “breathtaking” insider history of NASA’s space program—from astronauts Alan Shepard and Deke Slayton (Entertainment Weekly). On October 4, 1957, the Soviet Union launched Sputnik I, and the space race was born. Desperate to beat the Russians into space, NASA put together a crew of the nation’s most daring test pilots: the seven men who were to lead America to the moon. The first into space was Alan Shepard; the last was Deke Slayton, whose irregular heartbeat kept him grounded until 1975. They spent the 1960s at the forefront of NASA’s effort to conquer space, and Moon Shot is their inside account of what many call the twentieth century’s greatest feat—landing humans on another world. Collaborating with NBC’s veteran space reporter Jay Barbree, Shepard and Slayton narrate in gripping detail the story of America’s space exploration from the time of Shepard’s first flight until he and eleven others had walked on the moon.

**Ready for Takeoff** Roger Cliff,Chad J. R. Ohlandt,David Yang,2011 This monograph assesses China's aerospace capabilities and the extent to which China's participation in commercial aerospace markets and supply chains is contributing to the improvement of those capabilities. It examines China's commercial aviation manufacturing capabilities, its commercial and military capabilities in space, Chinese government efforts to encourage foreign participation in the development of China's aerospace industry, transfers of foreign aerospace technology to China, the extent to which U.S. and other foreign aerospace firms depend on supplies from China, and the implications of these issues for U.S. security interests. China's aerospace industry has advanced at an impressive rate over the past decade, partly due to the increasing participation of its aerospace industry in the global commercial aerospace market and the supply chains of the world's leading aerospace firms. China's current ability to meet demand with indigenous aircraft is limited, however, and much of the demand will be filled by imported aircraft. China's space capabilities have improved rapidly, on the other hand, and it has developed and deployed an increasingly wide range of satellites. China's growing civilian aerospace capabilities are unquestionably contributing to the development of its military aerospace capabilities, but whether the United States could significantly improve its security through alterations of its policy toward civil aerospace cooperation with China without having a significant negative effect on its own economic interests is unclear.

**China in Space** Brian Harvey,2019-10-08 In 2019, China astonished the world by landing a spacecraft and rover on the far side of the Moon, something never achieved by any country before. China had already become the world’s leading spacefaring nation by rockets launched, sending more into orbit than any other. China is now a great space superpower alongside the United States and Russia, sending men and women into orbit, building a space laboratory (Tiangong) and sending probes to the Moon and asteroids. Roadmap 2050 promises that China will set up bases on the Moon and Mars and lead the world in science and technology by mid-century. China’s space programme is one of the least well-known, but this book will bring the reader up to date with its mysteries, achievements and exciting plans. China has built a fleet of new, powerful Long March rockets, four launch bases, tracking stations at home and abroad, with gleaming new design and production facilities. China is poised to build a large, permanent space station, bring back lunar rocks, assemble constellations of communications satellites and send spaceships to Mars, the moons of Jupiter and beyond. A self-sustaining lunar base, Yuegong, has already been simulated. In space, China is the country to watch.

**Fundamentals of Aircraft and Rocket Propulsion** Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

**Chinese Anti-Ship Ballistic Missile (ASBM) Development** Andrew S. Erickson,2016-08-02 China’s anti-ship ballistic missile (ASBM), the DF-21D, has reached the equivalent of Initial Operational Capability. Although it probably has been deployed in small numbers, additional challenges and tests remain. This study examines the ASBM’s capability and history, showing how the DF-21D meets multiple priorities in Chinese defense modernization and in the national security bureaucracy, as well its implications for the United States. The ASBM’s physical threat to U.S. Navy ships will be determined by the development of associated systems and organizations, which currently limit data fusion and coordination in the complex task of identifying a U.S. aircraft carrier in the open ocean. Still, the ASBM poses a direct threat to the foundations of U.S. power project in Asia and will undermine the U.S. position, unless efforts to counter its political-military effects are taken.

**Chinese Poetry in Times of Mind, Mayhem and Money** Maghiel van Crevel,2008-10-02 Chinese Poetry in Times of Mind, Mayhem and Money is a groundbreaking study covering a range of contemporary authors and issues, from Haizi to Yin Lichuan and from poetic rhythm to exile-bashing. Its rigorous scholarship, literary sensitivity and

lively style make it eminently fit for classroom use.

**Stages to Saturn** Roger E. Bilstein,1999-08

Rockets and Missiles A. Bowdoin Van Riper,2007-11-26 Beginning with World War II, missiles transformed the art of war. For the first time, cities of warring nations were vulnerable to sudden, unannounced, long-distance attacks. At the same time, rockets made possible one of the great triumphs of the modern age—the exploration of space. Beginning with the origins of rocketry in medieval and early modern Asia, *Rockets and Missiles* traces the history of the technology that led to both the great fear of global warfare and the great excitement of the Space Age. This volume focuses on rocketry in late-twentieth-century Western Europe, Russia, and the United States, as well as the spread of rocket technology to East Asia and the Middle East. It covers the full history of rocket technology—including how rockets improved in performance, reliability, and versatility and how they affected everyday life.
