Spearhead of Logistics

Benjamin King 2016-02-25

Spearhead of Logistics is a narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued

to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.

The German Campaign in Russia George E. Blau 1955

The purpose of this study is to describe German planning and operations in the first part of the campaign against Russia. The narrative starts with Hitler's initial plans for an invasion of Russia and ends at the time of Germany's maximum territorial gains during the battle for Stalingrad.

German Northern Theater of Operations 1940-1945 [Illustrated Edition] Earl Ziemke 2015-11-06 [Includes 23 maps and 31 illustrations]

This volume describes two campaigns that the Germans conducted in their Northern Theater of Operations. The first they launched, on 9 April 1940, against Denmark and Norway. The second they conducted out of Finland in partnership with the Finns against the Soviet Union. The latter campaign began on 22 June 1941 and ended in the winter of 1944-45 after the Finnish Government had sued for peace. The scene of these campaigns by the end of 1941 stretched from the North Sea to the Arctic Ocean and from Bergen on the west coast of Norway, to

Petrozavodsk, the former capital of the Karelo-Finnish Soviet Socialist Republic. It faced east into the Soviet Union on a 700-mile-long front, and west on a 1,300-mile sea frontier. Hitler regarded this theater as the keystone of his empire, and, after 1941, maintained in it two armies totaling over a half million men. In spite of its vast area and the effort and worry which Hitler lavished on it, the Northern Theater throughout most of the war constituted something of a military backwater. The major operations which took place in the theater were overshadowed by events on other fronts, and public attention focused on the theaters in which the strategically decisive operations were expected to take place. Remoteness, German security measures, and the Russians' well-known penchant for secrecy combined to keep information concerning the Northern Theater down to a mere trickle, much of that inaccurate. Since the war, through official and private publications, a great deal more

has become known. The present volume is based in the main on the greatest remaining source of unexploited information, the captured German military and naval records. In addition a number of the participants on the German side have very generously contributed from their personal knowledge and experience. *Inside the Worlds of Star Wars, Attack of the Clones* Simon Beecroft 2003 A guide to the locations from "Star Wars, Episode II, Attack of the Clones" includes the planets Coruscant and Kamino, as well as details and cross-sections of sites from the Jedi Temple to the execution arena on Geonosis. Giraud, met secretly in Cherchel, seventy-five miles west of Algiers. The subject of their conversations was a momentous one—the imminent re-entry of French North Africa into the war. General Clark, acting on instructions from President Roosevelt, gave positive assurances to General Mast that the United States would furnish the equipment necessary to outfit the North African forces. Clark's commitment was timely, for Anglo-American forces were about to land in northwest Africa. More important, it heralded an event of great significance: the forthcoming assumption, by the United States, of direct responsibility for reequipping the French armed forces. The British had been discharging this responsibility by maintaining the small band of Frenchmen stubbornly fighting on their side and under their control since mid-1940. Before World War II had ended, the Americans had fully equipped and trained eight French divisions in North Africa, partially outfitted and trained

three more in France, furnished equipment for nineteen air squadrons, and carried out an extensive rehabilitation program for the French Navy. They had supplied some 1,400 aircraft, 160,000 rifles and carbines, 30,000 machine guns, 3,000 artillery guns, 5,000 tanks and These instructions were relayed in Msg R-2080, Gen George C. Marshall to Lt Gen Dwight D. Eisenhower, 17 Oct 42, CM-OUT 5682. (See Bibliographical Note.) "Clark . . . should state . . . the U.S. will furnish equipment for French Forces which will operate against the Axis." self-propelled weapons, and 51,000,000 rounds of ammunition. An occurrence of historic import was thus re-enacted in reverse. Twice France had similarly undertaken to assist an unprepared America at war. In 1781, in addition to sending an expeditionary corps to help the young colonies in their fight for independence, France supplied weapons and materiel to the infant Continental Army. Much later, in World War I. France, herself at war with Germany,

again provided materiel to the American Expeditionary Forces (A.E.F.) sent to the European continent. In that second episode, the nature and extent of the help rendered were vastly different from what they were to be in World War II. Yet the parallel is striking enough to warrant, for the sake of historical comparison, a brief account of the aid extended by the French to the American forces in 1917-18."

Storm of Steel Mary R.

Habeck 2014-08-22 In this fascinating account of the battle tanks that saw combat in the European Theater of World War II, Mary R. Habeck traces the strategies developed between the wars for the use of armored vehicles in battle. Only in Germany and the Soviet Union were truly original armor doctrines (generally known as "blitzkrieg" and "deep battle") fully implemented. Storm of Steel relates how the German and Soviet armies formulated and chose to put into practice doctrines that were innovative for the time, yet in many respects identical to one another. As part of her extensive archival research in Russia, Germany, and Britain, Habeck had access to a large number of formerly secret and top-secret documents from several post-Soviet archives. This research informs her comparative approach as she looks at the roles of technology, shared influences, and

assumptions about war in the formation of doctrine. She also explores relations between the Germans and the Soviets to determine whether collaboration influenced the convergence of their armor doctrines.

Force Multiplying Technologies for Logistics Support to Military Operations

National Research Council 2014-12-15 The mission of the United States Army is to fight and win our nation's wars by providing prompt, sustained land dominance across the full range of military operations and spectrum of conflict in support of combatant commanders. Accomplishing this mission rests on the ability of the Army to equip and move its forces to the battle and sustain them while they are engaged. Logistics provides the backbone for Army combat operations. Without fuel, ammunition, rations, and other supplies, the Army would grind to a halt. The U.S. military must be prepared to fight anywhere on the globe and, in an era of coalition

warfare, to logistically support its allies. While aircraft can move large amounts of supplies, the vast majority must be carried on ocean going vessels and unloaded at ports that may be at a great distance from the battlefield. As the wars in Afghanistan and Iraq have shown, the costs of conveying vast quantities of supplies is tallied not only in economic terms but also in terms of lives lost in the movement of the materiel. As the ability of potential enemies to interdict movement to the battlefield and interdict movements in the battlespace increases, the challenge of logistics grows even larger. No matter how the nature of battle develops, logistics will remain a key factor. Force Multiplying Technologies for Logistics Support to Military Operations explores Army logistics in a global, complex environment that includes the increasing use of antiaccess and area-denial tactics and technologies by potential adversaries. This report describes new technologies and systems that

would reduce the demand for logistics and meet the demand at the point of need, make maintenance more efficient, improve inter- and intratheater mobility, and improve near-real-time, in-transit visibility. Force Multiplying Technologies also explores options for the Army to operate with the other services and improve its support of Special Operations Forces. This report provides a logistics-centric research and development investment strategy and illustrative examples of how improved logistics could look in the future.

Scouts Out! The Development Of Reconnaissance Units In Modern Armies [Illustrated Edition] John J. McGrath

2014-08-15 Illustrated with 60 maps, plans and diagrams Reconnaissance and counter-reconnaissance are battlefield missions as old as military history itself and missions for which many armies have created specialized units to perform. In most cases, these units were trained, equipped, and used differently from the majority of an army's fighting units. Horse cavalry performed these missions for centuries, for it had speed and mobility far in excess of main battle units. Once the horse was replaced by mechanization, however, the mobility advantage once enjoyed by the horse cavalry disappeared. Since the early

20th century, the search for the proper mix of equipment, the proper organization, and the proper employment of reconnaissance units has bedeviled armies around the world. This survey uses a diverse variety of historical cases to illustrate the enduring issues that surround the equipping, organizing, and employment of reconnaissance units. It seems that these specialized units are either too heavily or too lightly equipped and too narrowly specialized or too conventionally organized. Pre-war reconnaissance doctrines tend to undergo significant change once fighting begins, leading to post-conflict analysis that reconnaissance units were "misused" in one way or another. McGrath ends his study with an intriguing conclusion about the role that specialized reconnaissance units should have in the future that may surprise many readers.

went on to one of, if not THE most successful of the wartime all-terrain vehicles. Designed with light weight to facilitate both air-dropping and efficient, high-speed operation in the snow, the vehicles were soon found to have excellent performance in the mud. Always amphibious, the later models, the M29C, were equipped with flotation tanks on each end and dual rudders in the rear for even more efficient operation in the water. Weasels were used on numerous fronts during WWII, were once again deployed in Korea, by the French in Vietnam, and numerous outposts during the Cold War. These pages provide an overview of the development, and a detailed look at the deployment and the machines themselves, of these iconic, all-terrain vehicles.

[Bastogne - The Story Of The First Eight Days](#) S. L. A. Marshall 2014-06-13 [This edition benefits from numerous maps of the battlefields that the actions were fought over] "NUTS!" - Among the many

military legends that abound from the fighting of the Second World War, the one word reply to a German summons to surrender must rank highly in terms of its resonance, importance and sheer grit. General Mcaulliffe decided that despite the odds and the lack of supplies and ammunition his troops would continue to hold the important communication hub of Bastogne during the Battle of the Bulge. This dramatic, yet authoritative account brings all of the action to the fore as the Battered Bastards of Bastogne wrote their names into legend. "THIS STORY OF BASTOGNE was written from interviews with nearly all the commanders and staff officers and many of the men who participated in the defense of Bastogne during the first phase of that now celebrated operation—the days during which the American forces were surrounded by forces of the enemy... Department of Defense Dictionary of Military and Associated Terms United States. Joint Chiefs of Staff 1987

The Mexican Expedition 1916-1917 Julie Irene Prieto 2016-09-05 On 9 March 1916, the forces of Doroteo Arango, better known as Francisco

"Pancho" Villa, attacked the small border town of Columbus, New Mexico. In response to the raid, President Woodrow Wilson authorized Brig. Gen. John J. "Black Jack" Pershing to organize an expedition into Chihuahua, Mexico, in order to kill or capture Villa and those responsible for the assault. By 15 March, 4,800 Regular Army soldiers had assembled in Columbus and Camp Furlong, the Army garrison just outside of the town's center. These men fanned out into the Mexican countryside on horseback in small, highly mobile cavalry detachments—sometimes led by local guides or by the Army's Apache scouts—that could cover large swaths of sparsely populated and rough terrain. Cavalrymen employed skills and strategies developed in the preceding decades on frontier campaigns in the West and in warfare against irregular, guerrilla forces in the Philippines. The Mexican Expedition, popularly called the "Punitive Expedition," was to be one of the last operations to employ these

methods of warfare and one of the first to rely extensively on trucks. It also provided a testing ground for another new technology—the airplane. During the eleven months that Pershing's expedition was in Chihuahua, U.S. troops failed to kill, capture, or even spot Pancho Villa, but the impact of the expedition reached far beyond the deserts of northern Mexico. The approximately 10,000 regulars that served in the Punitive Expedition gained experience in large, multiunit field operations at a time when small-unit actions were the norm. The Mexican Expedition, 1916-1917, by Julie Irene Prieto, examines the operation, led by General John Pershing, to search for, capture, and destroy Francisco "Pancho" Villa and his revolutionary army in northern Mexico in the year prior to the United States' entry into World War I. This campaign marked one of the final times cavalry was used on a large scale, and it was one of the first to use trucks and airplanes in the field. While Pershing's troops failed to capture Villa, both

Regular Army troops and National Guardsmen stationed on the border gained valuable experience in these new technologies.
