*Movable Bed Physical Models* Hsieh Wen Shen 2012-12-06

For centuries, physical models have been used to investigate complex hydraulic problems. Leonardo da Vinci (1452-1519) stated, "I will treat of such a subject. But first of all, I shall make a few experiments and then demonstrate why bodies are forced to act in this matter. " Even with the current advancements of mathematical numerical models, certain complex three-dimensional flow phenomena must still rely on physical model studies. Mathematical models cannot provide adequate solutions if physical processes involved are not completely known. Physical models are particularly attractive to investigate phenomena-involved sediment movements because many three-

dimensional sediment processes are still unclear at this stage. Theoretically, there are numerous factors governing movable bed processes and it is nearly impossible to design model studies to obey all the model criteria. Sometimes, appropriate lightweight materials are difficult or too costly to obtain. Often, distorted models are used due to the limitation of available space and the requirement for greater vertical flow depth to investigate vertical differences of various parameters. The turbulence level in the model may also be maintained at a sufficient level to reproduce a similar flow pattern in the prototype. Frequently, engineers are forced to employ distorted models that cannot be designed to satisfy all governing criteria correctly. Thus each hydraulic laboratory has developed its own rules for model testing and a great deal of experience is needed to interpret model results.

#### **Security Rights in Movable Property in European Private Law**

Eva-Maria Kieninger 2004-08-26 For every transnational lawyer, it is vital to know the differences between national secured transactions laws. Since the applicable law is determined by the place where the collateral is situated, it may change when movables are brought from one state to another. Introductory essays from comparative lawyers set the scene. The book then presents a survey of the law relating to secured transactions in the member states of the European Union. Following the Common Core approach, the national reports are centred around fifteen hypothetical cases dealing with the most important issues of secured transactions law, such as the creation of security rights in different business situations, the relationship between debtor and secured creditor, the

nature of the creditor's rights and their enforcement as against third parties. Each case is followed by a comparative summary. A general report evaluates the possibilities of European harmonisation in the field of secured transactions law.

Playing with the Book Hannah Field 2019-07-02 A beautifully illustrated exploration of how Victorian novelty picture books reshape the ways children read and interact with texts. The Victorian era saw an explosion of novelty picture books with flaps to lift and tabs to pull, pages that could fold out, pop-up scenes, and even mechanical toys mounted on pages. Analyzing books for young children published between 1835 and 1914, Playing with the Book studies how these elaborately designed works raise questions not just about what books should look like but also about what reading is, particularly in relation to children's literature and child readers. Novelty books promised (or threatened) to make reading a physical as well as intellectual activity, requiring the child to pull a tab or lift a flap to continue the story. These books changed the relationship between pictures, words, and format in both productive and troubling ways. Hannah Field considers these aspects of children's reading through case studies of different formats of novelty and movable books and intensive examination of editions that have survived from the nineteenth century. She discovers that children ripped, tore, and colored in their novelty books—despite these books' explicit instructions against such behaviors. Richly illustrated with images of these ingenious constructions, Playing with the Book argues that novelty books construct a process of reading that involves touch as well as sight, thus reconfiguring our understanding of the phenomenology of reading.

**Pop-up and Movable Books** Ann Rothwell Montanaro 1993 Ranging from Victorian picture stories to Disney classics and contemporary works on environmental issues, pop-up and movable books have amused, enlightened, and entertained children and adults for almost 150 years. Although most movable books are designed primarily for children, a significant number of fiction and nonfiction titles are intended for adult readers. Despite their enormous popularity, they are rarely reviewed or included in lists of children's books, and are seldom purchased for circulating libraries. Many are unindexed. Montanaro identifies, indexes, and describes over 1,600 titles by publication date, personal names of contributors, and series titles.

*Evaluation of a Movable Concrete Barrier System* Benjamin H. Cottrell 1994 The movable concrete barrier (MCB) system consists of 1-m-long sections of barrier connected by steel pins in hinges to form a barrier wall that is moved laterally with a transport/transfer vehicle. The MCB system allows for the quick closing and opening of a lane for construction work. A 1-km section of barrier can be laterally positioned in about 10 minutes. This system aids in the safe maintenance and reconstruction of highways with minimum inconvenience to the motoring public by limiting lane closures to the non-peak periods. The Virginia Department of

Transportation and its contractors used the MCB system on two road-widening projects on I-66 in Fairfax County. The objectives of this research were to evaluate the effectiveness of the MCB system and to develop guidelines for its use. The costs associated with the use of the system along with problems and benefits were examined. The results of the study showed that the MCB system performed adequately in its transfer operations, in redirecting errant vehicles, and in protecting the construction workers. Some general guidelines were developed for using the MCB system. The MCB system should be used on high volume, congested freeways (1) where there is a need for barrier protection and quick opening and closing of lanes or (2) where there is a need for a median barrier that can be quickly shifted.
