Julie M. Gates

Environmental Experiments about Land Thomas R. Rybolt, Robert C. Mebane, 1993 Presents experiments that explore the properties and erosion of soil, recycling, and organic waste.

Save the Earth Science Experiments Elizabeth Snoke Harris, 2008 Going green is a hot topic...and a hot science fair project. Author and scientist Elizabeth Snoke Harris knows what impresses, and she provides plenty of winning ideas, along with step-by-step guidance to insure that the end result is a success. Show how to harness energy with windmills, make a biogas generator, and create alternative fuels. Demonstrate green power with recycled paper, solar building, and compact fluorescent light bulbs. Test the ozone, be a garbage detective," and discuss how to reverse global warming. The importance of what children learn will go even beyond the science fair: they'll have the knowledge to understand what's happening to Planet Earth...and the desire to do something eco-friendly every day.

Environmental Science Fair Projects, Revised and Expanded Using the Scientific Method Thomas R. Rybolt, Robert C. Mebane, 2013-06-01 What is the best way to clean oil off feathers? How does soil erosion affect plant growth and food supply? Can the force in wind be used to generate electricity? The answers can be found by doing the fun and simple experiments in this book. Young scientists will explore the environment—the air, water, soil, pollution, and energy resources. For students interested in competing in science fairs, the book contains lots of great suggestions and ideas for further experiments.

Environmental Science Fair Projects Using Water, Feathers, Sunlight, Balloons, and More Thomas R. Rybolt, Robert C. Mebane, 2005 Learn all about air, water, soil, pollution, and energy resources while completing science experiments.

Eco-Fun David T. Suzuki, Kathy Vanderlinden, 2002 An activity book of great projects, games and experiments for a greener Earth. ;

Eco-Fun David Suzuki, University David T Suzuki, Kathy Vanderlinden, 2001-06-01 50 fun-filled, science-based environmental experiments teach kids how our planet works--and ways to make it better. The activities, divided thematically by earth, air, energy, water, and biodiversity, show how each element operates alone and in tandem, and its affects on us and the environment. Youngsters can do real life ecology projects, like building a solar panel, making recycled paper, and creating a forest ecosystem in a jar. ...packed with excellent ideas for both kids and educators....--Booklist.

A Child's Introduction to the Environment Michael Driscoll, Dennis Driscoll, 2021-03-16 Explore the water, land, and air around us with this entertaining and informative look at our magnificent planet—and learn how your experiments, activities, and everyday actions can help save the environment. This book looks at the wide variety of ecosystems and environmental regions of the Earth, from deserts and forests, to cities and farms, to oceans and ice caps, as well as the atmosphere, weather, energy sources, plants, and animals of each area. Michael Driscoll and professor of meteorology Dennis Driscoll explain the changes to our planet that are currently taking place, including rising temperatures and sea levels, and the effects they can have on our environment. They also profile young environmental activists like Greta Thunberg and Isra Hirsi, and highlight important, everyday actions such as water conservation and recycling that kids can do on their own or with their parents. Also included are fun projects and experiments to do at home like brewing sun tea, creating lightning, and making a smog detector. Packed with facts, experiments, and a removable poster with tips on how to save the planet, this comprehensive guide will inspire kids and their families to think about our planet in new ways and help keep it beautiful and healthy for years to come.

Water Robert Gardner, 2011-01-01 Provides environmentally friendly 'green' science projects about water--Provided by publisher.

Air Robert Gardner, 2012-01-15 Be green. It is important to keep Earth's air clean. Using the scientific method, readers perform hands-on experiments that explain the properties of air, how to conserve energy while heating and cooling air, and how to reduce air pollution. Readers who are interested in science fairs will find many ideas for science fair projects.

Take Care of Our Earth Gare Thompson, 1998 Easy experiments introduce kids to water, air, and land pollution. Earth Awareness.

STEM Green Science At Home Susan Martineau, 2021-05-11 Save the world with these fun step-by-step science projects you can do at home! Explore the science in everyday life with these simple, step-by-step experiments to do around the home that will teach kids to be eco-conscious. Each activity takes a complex, scientific concept and environmental issue in practice and makes it easy for kids to understand. This book also include practical actions to help children make a difference and important facts to communicate the climate crisis. Young scientists will enjoy discovering the science behind the simple phenomena all around them.

Consider the Earth Julie M. Gates, 1989 Packed with information and easy to use, this book swiftly immerses students in environmental processes and issues, and it teaches them important scientific concepts. The hands-on activities cover a wide range of environmental topics—water, soil, wildlife, plants, ecosystems, weather, environmental problems, and oceans. Each chapter begins with a clear explanation of the topic, followed by detailed lesson plans for activities, supplementary and alternative activities, vocabulary definitions, and discussion questions that enhance student understanding of key concepts. This revised edition features new chapters on oceans, global warming, the greenhouse effect, El Nino, and recycling. Updated information on environmental problems helps build student enthusiasm by exploring issues they already recognize as timely and important. Anyone who wants to learn more about their biophysical environment—in classrooms, with youth groups, in science clubs, or at home—will find this resource helpful. D

Planet Earth Kathleen M. Reilly, 2008-04-01 Planet Earth: 25 Environmental Projects You Can Build Yourself provides an engaging guide to the natural world and encourages children ages 9 and up to get their hands dirty and actively connect with the environment. It then introduces key environmental issues—wind and solar power, pollution, endangered species, global warming, and recycling—and posits potential solutions. Trivia, fun facts, and 25 captivating hands-on projects investigate ecology basics, such as the food chain, oxygen, and animal habitats, as well as ways to lessen the strain on Earth's resources by reducing human consumption and waste. With Planet Earth kids will learn how to respect and protect our unique planet.

Planet Earth Kathleen M. Reilly, 2019 Introduces middle grade readers to all the parts of the natural world, including the oceans, the atmosphere, the earth, and everything in between. In the book, kids master ecology basics, such as the food web and animal habitats, while also learning about environmental issues such as wind and

solar power, endangered species, climate change, and more.

Experiments on Energy, the Environment, and Sustainability R. Mark Isaac, Douglas A. Norton, 2011-04-07 Presents experimental economics research focusing on issues of environmental quality and sustainability. This title covers such topics as institutions for cap-and-trade, eco-tourism, urban sprawl, and optimal pollution control strategies.

Environmental Demonstrations, Experiments, and Projects for the Secondary School Thomas R. Brehman, 1973

Ace Your Ecology and Environmental Science Project Robert Gardner, Phyllis J. Perry, Salvatore Tocci, 2009-08-01 How many different organisms can you identify in a square meter of earth? What happens to plants if they don't have enough sunlight? Readers will learn the answers to these questions and more with the fun ecology and environmental experiments in this book. Young scientists will explore interactions of organisms and their environments. Many experiments include ideas students can use for science fairs.

Choice Experiments Informing Environmental Policy Ekin Birol, Phoebe Koundouri, 2008-01-01 . . . a text detailing several recent, state-of-the-art choice experiment studies in European Union countries is valuable for illustrating the usefulness of the method for informing environmental policy. . . Birol and Koundouri have admirably compiled an array of case studies that provide relevant information for European environmental, agricultural, natural resource management and food policy, and that also offer a number of advances in the application and analysis of the CEM. The text is suitable for academics and graduate students with an interest in current applications of stated preference methods and for policy-makers interested in understanding people's preferences for environmental quality. . . Bethany Cooper, *Australasian Journal of Environmental Management* This volume provides an assessment of the literature on environmental valuation in Europe. It outlines some of the key environmental policy issues facing European Union countries and provides information on preferences and values associated with policy options. It also provides a set of state of the art examples of preference elicitation and analysis. This volume will be of interest to a variety of audiences. The book provides insights that will be useful to policy makers interested in understanding the public's preferences for environmental quality and it will be useful to academics and graduate students interested in cutting edge applications of stated preference methods. Wictor Adamowicz, University of Alberta, Canada This innovative book is a compilation of state-of-the-art choice experiment studies undertaken in several European Union (EU) countries, including Finland, France, Greece, Ireland, Italy, Poland, Spain and the United Kingdom. The case studies presented concern a variety of environmental, agricultural and natural resource issues such as the management of water resources, forests and agricultural landscapes; conservation of biodiversity and cultural heritage; noise pollution reduction and food labeling. The book highlights how the choice experiment method can be employed to inform efficient and effective design and implementation of various EU level agricultural and environmental policies and directives, including the Common Agricultural Policy, Water Framework Directive, Forestry Strategy, Habitats Directive and food labeling systems. This book will be of great interest to researchers working in the fields of environmental, natural resource and agricultural economics. Academics and graduate students worldwide, as well as applied economists working in international and national organizations, would benefit from the cutting edge choice experiment applications presented in this book. International and national policy makers will also benefit from the information on the use and usefulness of the choice experiment method in informing efficient and effective environmental, agricultural and natural resource management policy making.

An Environmental History of the Early Modern Period Martin Knoll, Reinhold Reith, 2014 The environmental history of early modern times is a seminal and lively field of historical research. This volume offers ten concise essays that provide an overview of current research debates on a broad span of topics, such as historical climatology and climate reconstruction, coping with disaster, land use and agricultural knowledge, forest history, urbanization, the perceptions of (alpine) nature, and societal dealings with water and rivers. Taken together, the contributions establish early modern studies as a promising laboratory for new avenues in environmental history. Field Work and Laboratory Experiments in Integrated Environmental Sciences Noriko Hasebe, Masato Honda, Keisuke Fukushima, Seiya Nagao, 2023-12-23 This book introduces the variety of research skills necessary for integrated environmental science, which are applicable to atmospheric, oceanic, terrestrial, and biota studies. The surface environment of the earth is a complex system consisting of atmospheric, oceanic, and terrestrial regions as well as the biota therein, all of which interact with one another to various extents. The integration of research disciplines including earth science, biology, chemistry, physics, and social science is a core of environmental science. It encourages students and early-career scientists to take a broad view of the whole environmental system. Detailed practical information for the field or laboratory work in this book helps students and scientists to plan research strategy for their own scope and interests. In addition, this book is also useful for professionals to teach field and laboratory work in environmental science to students. This book is based on the environmental summer school program organized by the Institute of Nature and Environmental Technology, Kanazawa University, in Japan.
