Measure and Construction of the Japanese House Heino Engel,2020-08-11 A

remarkable classic work on traditional Japanese architecture and its general integrative quality, the order of space and form, the flexibility of partitions and room functions and other important or unique qualities. The author describes in detail, and with numerous architectural plans and drawings, the influence of the anatomy of the Japanese human body on traditional units of measurement and on house construction. This work is not simply a description of the features of the Japanese house, but an invitation to probe the possibilities of utilizing this architectural achievement of the Japanese ...in modern living and building, according to the author, who further believes that the unique features of the Japanese house are better suited to serve as a pattern for contemporary housing than any other form of residential structure.

Building the Japanese House Today Peggy Landers Rao,Len Brackett,2005-10 The traditional Japanese house is universally admired for its clean lines, intricate joinery, and unparalleled woodworking. The authors of this elegant volume, Peggy Landers Rao and Len Brackett, show how a classic Japanese- style house can be built to offer the warmth and comfort that modern homeowners require. Len Brackett, rigorously trained in traditional architecture in Kyoto, has spent decades adapting the ancient Japanese design aesthetic to Western needs. He builds traditional live-on-the-floor houses, as well as versions that accommodate furniture. Both types provide the essential features expected in today's new homes - central heating, insulation, weather stripping, thermal glazing, streamlined kitchens, computerized lighting systems, and the latest electronics. The book's primary focus is on a single guesthouse in California, but pictures of other adaptations of the traditional Japanese house in America exemplify various points. Architects will find reference charts of the prescribed set of proportions and dimensions normally passed down through a strict system of apprenticeship. anticipating shrinkage of various woods. A remarkable tool used to lay out precise joints is described in detail. Various sources are given for materials, including where to find a contemporary version of the distinctive, traditional earthen plaster.

Measure and Construction of the Japanese House Heino Engel,2020-08-11 A

remarkable classic work on traditional Japanese architecture, and how the style and features can serve as a model for contemporary residential buildings. With incredible detail (as well as numerous architectural plans and drawings), author and architect Heino Engel describes everything from room functions and the flexibility of partitions to the influence of human anatomy on Japanese units of measure. Rather than exploring why the traditional Japanese house is built the way it is, Engel delves into the practical information: what the Japanese house is and how it is built. This book is not simply a description of the features of the Japanese house, but an invitation to probe the possibilities of utilizing this architectural achievement of the Japanese...in modern living and building, according to the author, who further believes that the unique details of the Japanese house are better suited as a pattern for contemporary housing than any other form of residential structure. With a new foreword by architect and professor Mira Locher, Fellow of the American Institute of Architects, this updated hardcover edition brings this popular work to modern readers--in hopes that they may find ideas to adopt into their own home.

Edward Sylvester Morse,2013-09 This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1888 edition. Excerpt: ...upon which rest crosswise thin planks of wood with their edges overlapping. One sees this form of ceiling everywhere, from north to south, in inns, private dwellings, and shops. This form is as universal in Japan as is the ordinary white plaster-ceiling with us. In many other forms of

ceiling, however, wood of the most tortuous grain is preferred. In the little houses made for the tea-parties the ceiling is often of some rustic design, --either a layer of rush resting on bamboo rafters, or thin, wide strips of wood braided or matted like basket-work. Sometimes the ceiling instead of being flat is arching; that is, the sides run up like a roof, and meet above in a flat panel, or the ceiling may be made up of panels either square or angular. A very elaborate and beautiful ceiling is seen in fig. 127 (see page 146). The structure is supposed to be in imitation of a country thatched roof. The centre panel consists of a huge plank of cedar, the irregular grain cut out in such a way as to show the lines in high-relief, giving it the appearance of very old wood, in which the softer lines have been worn away. The round sticks which form the frame for the plank, and those bordering the ceiling, as well as those running from the corners of the ceiling to the corners of the plank, are of red pine with the bark unremoved. The radiating rafters are of large yellow bamboo, while the smaller beams running parallel to the sides of the room consist of small dark-brown and polished bamboo; the body of the ceiling is made up of a brown rush, called hagi, --this representing the thatch. This ceiling was simply charming; it was clean, pure, and effective; it gave the room a lofty appearance, and was moreover thoroughly constructive. Our architects might well.
