**Paul G. Harris**

*Advances in International Environmental Politics* M. Betsill, K. Hochstetler, D. Stevis, 2014-07-16 This book provides authoritative and up-to-date research for anyone interested in the study of international environmental politics. It demonstrates how the field of international environmental politics has evolved and identifies key questions, topics and approaches to guide future research.

*Global Warming and Global Politics* Matthew Paterson, 2013-02-01 Examines the major theories within international relations, and how these can help us understand the emergence of global warming as a political issue.

*Paths to a Green World The Political Economy of the Global Environment* Jennifer Clapp And Peter Dauvergne, 2008

*Environment and International Relations* Mark Imber, John Vogler, 2005-08-12 Environmental issues and questions of global change are now firmly established on the international political agenda. This book provides a wide-ranging survey of the current treatment of environmental issues in international relations. This book begins by looking at the relevance of the different theoretical approaches current in international relations to the study of the environment. It analyzes a wide range of approaches from the debate between neo-realism and liberal institutionalism to the significant connections between gender and global environmental change. The book goes on to consider a range of key international processes, discussing the monitoring and implementation of environmental agreements, the place of ideology in negotiations and the role of international organisations.

*Environmental NGOs in World Politics* Matthias Finger, Thomas Princen, 2013-01-11 At a time when states are reactive, at best, to the global ecological crisis and when economic globalization seems to be significantly contributing to the acceleration of that crisis, environmental non-governmental organisations (NGOs) are proliferating. This book explains the key role of NGOs in an emerging world environmental politics, showing how NGOs act both as independent bargainers and as agents of social learning, to link biophysical conditions to the political realm at both the local and global levels. Through the use of case studies the authors reveal the richness and diversity of NGO activity and the difficulty of the choices facing decision-makers in their attempts to protect the environment, seek new forms of governance and foster social environmental learning. The book generates questions that are central, not only to an understanding of NGO relations, but to the study of international environmental politics. *Environmental NGOs in World Politics* will be of great interest to upper level student and scholars of both environmental politics and international relations. It will also appeal to environmental-policy professionals.

**Climate Change and Foreign Policy** Paul G. Harris, 2009-06-03 *Climate Change and Foreign Policy: Case Studies from East to West* and its companion volume, *Environmental Change and Foreign Policy: Theory and Practice*, examine and explain the role of foreign policy politics, processes and institutions in efforts to protect the environment and natural resources. They seek to highlight international efforts to address human-induced changes to the natural environment, analyze the actors and institutions that constrain and shape actions on environmental issues, show how environmental changes influence foreign policy processes, and critically assess environmental foreign policies. This book examines the problem of global climate change and assesses the manner in which governments and other actors have attempted to deal with it. It presents a series of in-depth international case studies on climate policy in Australia, Japan, China, Turkey, Hungary, Denmark, France, the European Union and the United States. The authors demonstrate how studying environmental foreign policy can help us to better understand how governments, businesses and civil society actors address—or fail to address—the critical problem climate change. This book will be of strong interest to scholars and students of environmental policy and politics, foreign policy, public policy, climate change and international relations.

*The Politics of Climate Change* Paul G. Harris, 2013-09-13 Climate change is now a mainstream part of the international political agenda. It has become clear that it is not solely a technical issue, to be resolved by scientists, but a political issue with political implications at all levels of global

governance. Indeed, some may argue that few long-term problems in international affairs are more important than this one. The purpose of this book is to reveal and apply some of the latest thinking on the implications of climate change for international affairs, and to explore how various proposals for tackling climate change will affect interstate relations in coming years. Chapters by scholars of international relations, international political economy and international law contribute to current discussions of climate change, doing so in way that is accessible to students, stakeholders, government officials and informed laypersons. Some questions considered in the book include the following: How has the discussion of climate change affected interstate relations? How does this problem, and how do environmental issues more generally, challenge international relations theory? How do international climate politics influence domestic politics, and vice-versa? How would climate change or action taken to tackle it affect the balance of power or balance of influence? Is climate change a matter of international security or international justice—or both—and how does the answer to this question affect policy responses of governments? Which states are likely to benefit or suffer from the various proposals to address climate change? What are the legal, ethical and political implications of the uneven distribution of the impacts of climate change? This book was previously published as a special issue of the Cambridge Review of International Affairs.

New Structures for Global Environmental Policy German Advisory Council On Global Change Wgbu, 2010-09-23 International institutions and structures are crucial to the management of the global environment. The present arrangements are failing to cope adequately with the scale of the task and the demands placed on them, and alternatives are urgently needed. In this second volume of *World in Transition*, experts in the German Advisory Council on Global Change (WGBU) analyze the problems and set out comprehensive and persuasive policies for a successful future regime. Central to the future, it argues, will be a strengthened and more effective UN Environment Programme within an alliance organized around three main objectives of assessment, organization and funding.

*Global Environmental Politics* Gareth Porter, 1991 Essays discuss environmental issues, interest groups, security and trade considerations, and future approaches to environmental policy

**The Global Environment and World Politics** Elizabeth R. DeSombre, 2002

**Global Ecopolitics** Peter J. Stoett, 2019-01-01 Despite sporadic news coverage of extreme weather events, high-level climate change diplomacy, special UN days of celebration, and popular media references to impending ecological collapse, most students are not exposed to the detailed presentation and analysis of the international relations and diplomacy of environmental policy-making. Comprehensive and accessibly written for first-year or second-year undergraduates, the second edition of *Global Ecopolitics* provides students with a panoramic view of the policymakers and the structuring bodies involved in the creation of environmental policies. Detailing a considerable amount of environmental activity since its initial 2012 publication, this up-to-date second edition uses an applicable framework of systemic analysis and important case studies that push students to form their own conclusions about past efforts, present needs, and future directions.

**Environmental Change and Foreign Policy** Paul G. Harris, 2009-06-03 *Environmental Change and Foreign Policy: Theory and Practice* and its companion volume, *Climate Change and Foreign Policy: Case Studies from East to West*, examine and explain the role of foreign policy politics, processes and institutions in efforts to protect the environment and natural resources. They seek to highlight international efforts to address human-induced changes to the natural environment, analyze the actors and institutions that constrain and shape actions on environmental issues, show how environmental changes influence foreign policy processes, and critically assess environmental foreign policies. Focusing on theory and practice, this book: Introduces the concepts and theories of Environmental Foreign Policy, providing a theoretical overview as well as addressing the construction of nature, the symbolism of environmental policy, and business and government responses to climate change. Explores the practice of Environmental Foreign Policy, describing how both developed and developing countries have approached a variety of environmental issues, including persistent organic pollutants, water, biodiversity, climate change and the trade-

environment nexus. This book will be of strong interest to scholars and students of environmental policy and politics, foreign policy, public policy, climate change and international relations.

*The Environment and International Relations* Kate O'Neill, 2017-02-06 The new edition of this exciting textbook introduces students to the ways in which the theories and tools of international relations and other social science disciplines can be used to analyse and address global environmental problems. Kate O'Neill develops an innovative historical and analytical framework for understanding global environmental issues, integrating insights from different disciplines, and she identifies the main actors and their roles, thereby encouraging readers to engage with the issues and equip themselves with the knowledge they need to apply their own critical insights. Revised and updated, the new edition features new figures, examples, textboxes, and a new chapter on the emergence and politics of market mechanisms as a new mode of global environmental governance. The latest developments in the field, including the December 2015 Paris Climate Agreement, along with new perspectives and recent thinking, are incorporated throughout. This will be invaluable for students of environmental issues both from political science and environmental studies perspectives.

Climate Change in World Politics J. Vogler, 2016-02-02 John Vogler examines the international politics of climate change, with a focus on the United Nations Framework Convention (UNFCCC). He considers how the international system treats the problem of climate change, analysing the ways in which this has been defined by the international community and the interests and alignments of state governments.

International Organizations in Global Environmental Governance Frank Biermann, Bernd Siebenhüner, Anna Schreyögg, 2009-01-28 This book provides a comparative study of the role of international organizations in environmental governance. Whilst a growing body of literature considers global governance in a number of policy areas, this volume delivers one of the first comprehensive accounts of international organizations in relation to environmental policy. Providing the reader with key insights within this area of global governance, the book focuses on policies developing in relation to climate change, biodiversity and international environmental funding. Presenting a compelling and up-to-date account of developments within this burgeoning policy area, the volume: • includes a range of case studies including the World Bank, UNEP and the OECD • presents quantitative and qualitative research that advances understanding of international organizations in the field of international relations • delivers contributions from a range of internationally renowned academics and specialists within the field International Organizations in Global Environmental Governance will be of interest to students and scholars of international relations theory, international economics, environmental policy, organizational theory and environmental studies.

A Research Agenda for Global Environmental Politics Peter Dauvergne, Justin Alger, 2018-09-28 In a world confronted with escalating environmental crises, are academics asking the right questions and advocating the best solutions? This Research Agenda paves the way for new and established scholars in the field, identifying the significant gaps in research and emerging issues for future generations in global environmental politics.

Global Environmental Issues Frances Harris, 2012-02-08 Global Environmental Issues, second edition builds on the popularity of the first edition, viewing global environmental problems as complex issues with a network of causes, influenced by a range of actors with differing priorities. The book recognises that science underpins much of what happens in society and therefore it is important to be able to interpret the environmental and social consequences of scientific developments. In addition to discussing the main biophysical causes, the book illustrates how socio-economic and political factors determine why and how people use land, resources and technology, and how this in turn affects natural resource management. This edition includes new chapters on the politics of science, International environmental regulation and treaties, environmental issues in a globalised world and natural resource management. Global Environmental Issues, second edition is essential reading for upper level undergraduates and Masters students within departments of Environmental Science and Geography. Includes case studies from around the world to provide a

real life context for the issues tackled in each chapter Considers both the results of human actions and natural environmental change in order to provide balanced, in-depth debate Includes coverage of contemporary 'hot topics' such as biodiversity, globalization and sustainable development Chapters authored by experts in the field Includes new chapters on The politics of science, International environmental regulation and treaties , Environmental issues in a globalised world and Natural Resource Management Expanded sections include negotiating multilateral environmental agreements, GM crops, biofuels and marine and freshwater resources

**Climate for Change** Peter Newell,2000-09-04 This volume provides a challenging explanation of the forces that have shaped the international global warming debate. It takes a novel approach to the subject by concentrating on the ways non-state actors--such as scientific, environmental and industry groups, as opposed to governmental organizations--affect political outcomes in global fora on climate change. It also provides insights into the role of the media in influencing the agenda. The book draws on a range of analytical approaches to assess and explain the influence of these nongovernmental organizations on the course of global climate politics. The book will be of interest to all researchers and policy makers associated with climate change, and will be used in university courses in international relations, politics, and environmental studies.

**The Politics of Global Atmospheric Change** Ian H. Rowlands,1995

*Change in Global Environmental Politics* Michael W. Manulak,2022-05-12 In a period of planetary crisis, this book shows how large-scale change occurs in global environmental politics.
